# ABOUT THIS GUIDE

This document is the User Guide to Kaspersky Internet Security 2016 (hereinafter Kaspersky Internet Security).

For proper use of Kaspersky Internet Security, you should be acquainted with the interface of the operating system that you use, have experience with the main techniques specific for that system, and know how to work with email and the Internet.

This Guide is intended to do the following:

- Help you to install, activate, and use Kaspersky Internet Security.
- Provide a way to quickly find information on issues related to Kaspersky Internet Security.
- Describe additional sources of information about the application and ways of receiving technical support.

## IN THIS SECTION

---

In this Guide.....	<a href="#">7</a>
Document conventions.....	<a href="#">10</a>

## IN THIS GUIDE

This document contains the following sections:

### **Sources of information about the application (see page [12](#))**

This section lists the sources of information about the application.

You can select the most suitable information source, depending on the level of importance and urgency of the issue.

### **Kaspersky Internet Security (see page [14](#))**

This section describes the functions, components, and distribution kit of Kaspersky Internet Security, and provides a list of hardware and software requirements of Kaspersky Internet Security and user service information.

### **Installing and removing the application (see page [19](#))**

This section contains step-by-step instructions for application installation and removal.

### **Application licensing (see page [31](#))**

This section covers the main aspects of application licensing.

### **Managing application notifications (see page [39](#))**

This section provides information about how to manage application notifications.

### **Assessing computer protection status and resolving security issues (see page [40](#))**

This section provides information about how to evaluate the computer's security status and fix security threats.

**Updating databases and program modules (see page [41](#))**

This section contains step-by-step instructions on how to update databases and application software modules.

**Scanning the computer (see page [43](#))**

This section contains step-by-step instructions on how to scan your computer for viruses, malware, and vulnerabilities.

**Restoring an object deleted or disinfected by the application (see page [46](#))**

This section contains step-by-step instructions on how to restore an object that has been deleted or disinfected.

**Troubleshooting the operating system after infection (see page [47](#))**

This section provides information about how to restore the operating system after it has been infected with viruses.

**Protecting email (see page [49](#))**

This section provides information about how to protect your email against spam, viruses, and other threats.

**Protecting private data on the Internet (see page [51](#))**

This section provides information about how to make your Internet browsing safe and protect your data against theft.

**Web Tracking Protection (see page [62](#))**

This section provides information on how Kaspersky Internet Security can protect you against tracking of your online activity.

**Anti-Banner protection during website browsing (see page [66](#))**

This section describes how you can use Kaspersky Internet Security to stop banners from showing on websites.

**Removing traces of activity on the computer and on the Internet (see page [68](#))**

This section provides information on how to clear traces of user activity from the computer.

**Controlling users' activity on the computer and on the Internet (see page [70](#))**

This section provides information about how to control users' actions on the computer and on the Internet by using Kaspersky Internet Security.

**Remote management of computer protection (see page [77](#))**

This section describes how you can manage protection of your computer remotely via My Kaspersky portal.

**Reserving operating system resources for computer games (see page [79](#))**

This section contains instructions on how to improve the performance of the operating system for computer games and other applications.

**Handling unknown applications (see page [80](#))**

This section provides information about how to prevent applications from performing unauthorized operations on your computer.

## **Trusted Applications mode (see page [88](#))**

This section provides information about Trusted Applications mode.

## **Password-protecting access to control over Kaspersky Internet Security (see page [91](#))**

This section contains instructions on how to protect the application settings with a password.

## **Pausing and resuming computer protection (see page [92](#))**

This section contains step-by-step instructions on how to enable and disable the application.

## **Restoring the default application settings (see page [93](#))**

This section contains instructions on how to restore the default application settings.

## **Viewing the application operation report (see page [95](#))**

This section contains instructions on how to view application reports.

## **Applying the application settings on another computer (see page [96](#))**

This section provides information about how to export the application settings and apply them on another computer.

## **Participating in Kaspersky Security Network (see page [97](#))**

This section provides information about Kaspersky Security Network and how to participate in Kaspersky Security Network.

## **Participating in the Protect a Friend program (see page [99](#))**

This section provides information about the Protect a Friend program, which allows you to collect bonus points and receive discounts towards Kaspersky Lab applications.

## **Using the application from the command prompt (see page [104](#))**

This section provides information on how to control the application via the command prompt.

## **Assistance from Kaspersky Lab Technical Support (see page [105](#))**

This section describes the ways to get technical support and the terms on which it is available.

## **Limitations and warnings (see page [109](#))**

This section describes limitations that are not critical to operation of the application.

## **Glossary (see page [114](#))**

This section contains a list of terms mentioned in the document and their definitions.

## **Kaspersky Lab ZAO (see page [120](#))**

This section provides information about Kaspersky Lab.

**Information about third-party code (see page 121)**

This section provides information about the third-party code used in the application.

**Trademark notices (see page 122)**

This section lists trademarks of third-party manufacturers that are used in the document.

**Index**

This section allows you to quickly find required information within the document.

# DOCUMENT CONVENTIONS

This document uses the following conventions (see table below).

Table 1. Document conventions

SAMPLE TEXT	DESCRIPTION OF DOCUMENT CONVENTION
Note that...	Warnings are highlighted in red and boxed. Warnings show information about actions that may have unwanted consequences.
We recommended that you use...	Notes are boxed. Notes provide additional and reference information.
<b>Example:</b> ...	Examples are given on a yellow background under the heading "Example".
<i>Update means...</i> The <i>Databases are out of date</i> event occurs.	The following elements are italicized in the text: <ul style="list-style-type: none"> <li>• New terms</li> <li>• Names of application statuses and events</li> </ul>
Press <b>ENTER</b> . Press <b>ALT+F4</b> .	Names of keyboard keys appear in bold and are capitalized. Names of keys that are connected by a + (plus) sign indicate the use of a key combination. Such keys must be pressed simultaneously.
Click the <b>Enable</b> button.	Names of application interface elements, such as entry fields, menu items, and buttons, are set off in bold.

SAMPLE TEXT	DESCRIPTION OF DOCUMENT CONVENTION
<p>➤ <i>To configure a task schedule:</i></p>	<p>Introductory phrases of instructions are italicized and are accompanied by the arrow sign.</p>
<p>In the command line, type <code>help</code>.</p> <p>The following message then appears:</p> <p>Specify the date in <code>dd:mm:yy</code> format.</p>	<p>The following types of text content are set off with a special font:</p> <ul style="list-style-type: none"> <li>• Text in the command line</li> <li>• Text of messages that the application displays on screen</li> <li>• Data to be entered using the keyboard</li> </ul>
<p>&lt;User name&gt;</p>	<p>Variables are enclosed in angle brackets. Instead of the variable, insert the corresponding value, not including the angle brackets.</p>

# SOURCES OF INFORMATION ABOUT THE APPLICATION

This section lists the sources of information about the application.

You can select the most suitable information source, depending on the level of importance and urgency of the issue.

## IN THIS SECTION

---

Sources of information for independent research.....	<a href="#">12</a>
Discussing Kaspersky Lab applications on the Forum .....	<a href="#">13</a>

## SOURCES OF INFORMATION FOR INDEPENDENT RESEARCH

You can use the following sources of information about Kaspersky Internet Security to research on your own:

- Kaspersky Internet Security page on the Kaspersky Lab website
- Kaspersky Internet Security page on the Technical Support website (Knowledge Base)
- Online help
- Documentation

If you cannot find the solution to an issue on your own, we recommend that you contact Kaspersky Lab Technical Support (see the section "Technical support by phone" on page [105](#)).

An Internet connection is required to use information sources on websites.

### Kaspersky Internet Security page on the Kaspersky Lab website

On the Kaspersky Internet Security page (<http://www.kaspersky.com/multi-device-security>), you can view general information about the application and its functions and features.

Kaspersky Internet Security page contains a link to the eStore. There you can purchase or renew the application.

### Kaspersky Internet Security page in the Knowledge Base

*Knowledge Base* is a section on the Technical Support website.

On the Kaspersky Internet Security page in the Knowledge Base (<http://support.kaspersky.com/kis2016>), you can read articles that provide useful information, recommendations, and answers to frequently asked questions on how to purchase, install, and use the application.

Articles in the Knowledge Base may provide answers to questions that relate both to Kaspersky Internet Security as well as to other Kaspersky Lab applications. Articles in the Knowledge Base may also contain news from Technical Support.

## Online help

The online help of the application comprises help files.

Context help provides information about Kaspersky Internet Security windows, describes Kaspersky Internet Security settings and contains links to task descriptions where those settings are used.

Full help provides information on how to configure and use Kaspersky Internet Security.

## Documentation

The application user guide provides information about how to install, activate, and configure the application, as well as about use of the application. The document also describes the application interface and provides ways for solving typical user tasks during use of the application.

# DISCUSSING KASPERSKY LAB APPLICATIONS ON THE FORUM

If your question does not require an immediate answer, you can discuss it with Kaspersky Lab experts and other users on our forum (<http://forum.kaspersky.com>).

On the forum you can view existing topics, leave your comments, and create new discussion topics.

# KASPERSKY INTERNET SECURITY

This section describes the functions, components, and distribution kit of Kaspersky Internet Security, and provides a list of hardware and software requirements of Kaspersky Internet Security and user service information.

## IN THIS SECTION

---

About Kaspersky Internet Security .....	<a href="#">14</a>
What's new.....	<a href="#">16</a>
Distribution kit.....	<a href="#">17</a>
Service for users .....	<a href="#">17</a>
Hardware and software requirements .....	<a href="#">18</a>

## ABOUT KASPERSKY INTERNET SECURITY

Kaspersky Internet Security provides comprehensive computer protection against known and new threats, network and phishing attacks, and spam. Various functions and protection components are available as part of Kaspersky Internet Security to deliver comprehensive protection.

### Computer Protection

*Protection components* are designed to protect the computer against known and new threats, network attacks, fraud, and spam. Every type of threat is handled by an individual protection component (see the description of components in this section). Components can be enabled or disabled independently of one another, and their settings can be configured.

In addition to the real-time protection provided by the security components, we recommend that you regularly *scan* your computer for viruses and other malware. This is necessary in order to prevent any possible spreading of malicious programs that have not been discovered by protection components, for example, because a low security level was set or for other reasons.

To keep Kaspersky Internet Security up to date, you need to *update* the databases and application modules used by the application.

Some specific tasks that should be run occasionally (such as removal of traces of a user's activities in the operating system) are performed by using *advanced tools and wizards*.

The following protection components stand guard over your computer in real time:

What follows is a description of the logic of how the protection components interact when Kaspersky Internet Security has been set to the mode that is recommended by Kaspersky Lab specialists (in other words, with the default application settings).

#### File Anti-Virus

File Anti-Virus prevents infection of the computer's file system. The component starts upon startup of the operating system, continuously remains in the computer's RAM, and scans all files that are opened, saved, or launched on your computer and all connected drives. Kaspersky Internet Security intercepts each attempt to access a file and scans the file for known viruses and other malware. Further access to the file is allowed only if the file is not infected or is successfully disinfected by the application. If a file cannot be disinfected for any reason, it is deleted. A copy of the file is moved to Quarantine when that happens. If an infected file is placed in the same location where the deleted file with the same name used to be, Quarantine saves only a copy of the last file. A copy of the previous file with the same name is not saved.

### Mail Anti-Virus

Mail Anti-Virus scans incoming and outgoing email messages on your computer. An email message is available to the recipient only if it does not contain dangerous objects.

### Web Anti-Virus

Web Anti-Virus intercepts and blocks the execution of scripts on websites if they pose a threat. Web Anti-Virus also monitors all web traffic and blocks access to dangerous websites.

### IM Anti-Virus

IM Anti-Virus ensures the safe use of IM clients. The component protects information that comes to your computer via IM protocols. IM Anti-Virus ensures safe operation of various applications for instant messaging.

### Application Control

Application Control logs actions performed by applications in the operating system, and manages applications' activities based on the group to which the component has assigned an application. A set of rules is specified for each group of applications. These rules manage the applications' access to various operating system resources.

### System Changes Control

System Changes Control controls changes made to the operation system settings by other applications and notifies you about such changes. Certain browser settings and proxy server settings belong to the controlled settings.

### Webcam Access

Webcam Access component blocks unauthorized access to the webcam and notifies you that access has been blocked.

### Firewall

Firewall ensures your security when you use local networks and the Internet. The component filters all network activities by using rules of two types: *rules for applications* and *packet rules*.

### Network Monitor

Network Monitor is designed for monitoring network activity in real time.

### System Watcher

System Watcher component can be used to roll back malware actions in the operating system.

### Network Attack Blocker

Network Attack Blocker loads at operating system startup and tracks incoming network traffic for activities characteristic of network attacks. When an attempt to attack your computer is detected, Kaspersky Internet Security blocks all network activity from the attacking computer that is aimed at your computer.

### Anti-Spam

Anti-Spam integrates into the email client installed on your computer and scans all incoming email messages for spam. All messages containing spam are marked with a special header. You can configure Anti-Spam to handle spam messages in a particular way (for example, delete them automatically or move them to a special folder).

### Anti-Phishing

Anti-Phishing allows checking URLs to find out if they are included in the list of phishing URLs. This component is built into Web Anti-Virus, Anti-Spam, and IM Anti-Virus.

### Anti-Banner

Anti-Banner blocks ad banners on websites and in application interfaces.

### Private Browsing

Private Browsing detects requests sent by the web browser to tracking services and can modify requests to and responses from tracking services in a way that protects you from tracking of your online activity.

### Safe Money

Safe Money provides protection of confidential data when using online banking services and payment systems, and prevents theft of funds when making online payments.

### Secure Keyboard Input

Secure Keyboard Input provides protection from keyloggers for personal data entered on websites. On-Screen Keyboard prevents interception of data entered on the hardware keyboard and protects personal data against interception attempts that use screen shots.

## Trusted Applications mode

Trusted Applications mode protects the computer from applications that may be unsafe. When Trusted Applications mode is enabled, Kaspersky Internet Security allows running only applications that are identified as trusted (for example, based on information about an application from Kaspersky Security Network, or a trusted digital signature).

## Parental Control

Parental Control is designed to protect children and teenagers from threats related to computer and Internet use.

Parental Control allows you to set flexible restrictions on access to web resources and applications for different users depending on their age. In addition, Parental Control allows viewing statistical reports on the activities of controlled users.

## Online Management

If Kaspersky Internet Security is installed on a computer and you have an account on My Kaspersky portal, you can manage protection of this computer remotely.

## Participating in the Protect a Friend program

Participation in the Protect a Friend program allows you to receive bonus points when you share links to Kaspersky Internet Security with your friends. You can exchange your bonus points for a bonus activation code for Kaspersky Internet Security.

# WHAT'S NEW

Kaspersky Internet Security provides the following new features:

- The application now switches to limited functionality mode when the license expires.
- Interaction of the application with supported browsers has been improved: now a single extension is used instead of several separate plug-ins.
- Anti-Phishing protection has been improved.
- The graphic user interface has been improved.
- The size of the application installation package has been reduced.

- Private Browsing functionality has been added.
- System Changes Control functionality has been added.
- Trusted Applications mode can now be enabled without running an analysis of the installed applications.
- It is now possible to create Firewall rules in notification windows.
- Network activity of applications can now be controlled before Kaspersky Internet Security has started.
- The **Manage resources** window has been improved.
- The operation of Protected Browser has been improved.
- Protection against unauthorized recording of the audio stream from built-in and external microphones has been added.

## DISTRIBUTION KIT

You can purchase the application in one of the following ways:

- Boxed. Distributed via stores of our partners.
- At the eStore. Distributed at online stores of Kaspersky Lab (for example, <http://www.kaspersky.com>, in the Online Shop section) or via partner companies.

If you purchase the boxed version of the application, the distribution kit contains the following items:

- Sealed envelope with the setup CD, which contains application files and documentation files
- Brief User Guide, with an activation code
- License Agreement, which stipulates the terms on which you can use the application

The content of the distribution kit may differ depending on the region in which the application is distributed.

If you purchase Kaspersky Internet Security at an online store, you copy the application from the website of the store. Information that is required for activating the application, including an activation code, will be sent to you by email after your payment has been received.

## SERVICE FOR USERS

By purchasing a license for the application, you can benefit from the following services during the entire term of the license:

- Database updates and access to new versions of the application.
- Consultations by phone and by email on issues that are related to installation, configuration, and use of the application.
- Notifications about the release of new applications by Kaspersky Lab and of new viruses and virus outbreaks. To use this service, subscribe to receive news from Kaspersky Lab on the Technical Support website.

No consultations are provided on issues that are related to operating systems or third-party software and technologies.

# HARDWARE AND SOFTWARE REQUIREMENTS

General requirements:

- 480 MB free disk space on the hard drive
- CD-/DVD-ROM (for installing from the installation CD)
- Internet access (for the application installation and activation and for updating databases and software modules)
- Microsoft® Internet Explorer® 8.0 or later

To access My Kaspersky portal, we recommend using Microsoft Internet Explorer 9.0 or later.

- Microsoft Windows® Installer 3.0 or later
- Microsoft .NET Framework 4 or later
- Webcam access protection is provided only for compatible webcam models (<http://support.kaspersky.com/12001>)

Requirements for Microsoft Windows XP Home Edition (Service Pack 3 or later), Microsoft Windows XP Professional (Service Pack 3 or later), and Microsoft Windows XP Professional x64 Edition (Service Pack 2 or later):

- Processor with a clock speed of 1 GHz or higher
- 512 MB free RAM

Requirements for Microsoft Windows Vista® Home Basic (Service Pack 1 or later), Microsoft Windows Vista Home Premium (Service Pack 1 or later), Microsoft Windows Vista Business (Service Pack 1 or later), Microsoft Windows Vista Enterprise (Service Pack 1 or later), Microsoft Windows Vista Ultimate (Service Pack 1 or later), Microsoft Windows 7 Starter (Service Pack 1 or later), Microsoft Windows 7 Home Basic (Service Pack 1 or later), Microsoft Windows 7 Home Premium (Service Pack 1 or later), Microsoft Windows 7 Professional (Service Pack 1 or later), Microsoft Windows 7 Ultimate (Service Pack 1 or later), Microsoft Windows 8, Microsoft Windows 8 Pro, Microsoft Windows 8 Enterprise, Microsoft Windows 8.1 (Windows 8.1 Update), Microsoft Windows 8.1 Pro (Windows 8.1 Update), Microsoft Windows 8.1 Enterprise (Windows 8.1 Update), and Microsoft Windows 10 RTM (Kaspersky Internet Security has functionality limitations (see the section "Limitations and warnings" on page [109](#)) when installed on Microsoft Windows 10 RTM):

- Processor with a clock speed of 1 GHz or higher
- 1 GB free RAM (for 32-bit operating systems); 2 GB free RAM (for 64-bit operating systems)

Requirements for tablet computers:

- Microsoft Tablet PC
- Intel® Celeron® CPU 1.66 GHz or faster
- 1000 MB free RAM

Requirements for netbooks:

- Intel Atom™ CPU 1.60 GHz or faster
- 1024 MB free RAM
- 10.1-inch display with 1024x600 screen resolution
- Intel GMA 950 graphics core

# INSTALLING AND REMOVING THE APPLICATION

This section contains step-by-step instructions for application installation and removal.

## IN THIS SECTION

Standard installation procedure.....	<a href="#">19</a>
Installing the application from the command prompt .....	<a href="#">23</a>
Getting started.....	<a href="#">23</a>
Upgrading a previous version of the application.....	<a href="#">24</a>
Switching from Kaspersky Internet Security to Kaspersky Total Security .....	<a href="#">27</a>
Remove the application.....	<a href="#">29</a>

## STANDARD INSTALLATION PROCEDURE

Kaspersky Internet Security will be installed to your computer in interactive mode using the Setup Wizard.

The Wizard consists of a series of pages (steps), which you can navigate through by clicking the **Back** and **Next** buttons. To close the Wizard after it finishes, click the **Finish** button. To stop the Wizard's activity at any step of installation, close the Wizard window.

If the application will be used to protect more than one computer (with the maximum number of computers defined by the terms of the End User License Agreement), the installation procedure will be identical on all computers.

◆ *To install Kaspersky Internet Security on your computer:*

On the installation CD, run the file with the .exe extension.

In some regions, the installation CD does not include the application installation package. The installation CD contains only the autorun file. When this file is executed, the application download window opens. Click the **Download and Install** button in the application download window. Kaspersky Internet Security is downloaded from the Internet and installed. If the download failed, click the **Download and install manually from website** link that will take you to a website where you can download the application manually.

The application is then installed with the help of a standard Setup Wizard.

To install Kaspersky Internet Security, you can also download an installation package from the Internet. In this case, the Setup Wizard displays several additional installation steps for some localization languages.

Along with the application, plug-ins for web browsers are installed to ensure safe Internet browsing.

When you run audio and video recording or playback applications for the first time since installation of Kaspersky Internet Security, audio and video playback or recording may be interrupted. This is necessary in order to enable protection of application access to sound recording devices (see the section "About access by applications to sound recording devices" on page [85](#)). The system service that controls audio hardware is restarted during installation of the application.

**IN THIS SECTION**

Step 1. Checking for a newer version of the application .....	<a href="#">20</a>
Step 2. Starting installation of the application.....	<a href="#">20</a>
Step 3. Reviewing the License Agreement.....	<a href="#">20</a>

Step 9. Completing activation.....	<a href="#">23</a>

## STEP 1. CHECKING FOR A NEWER VERSION OF THE APPLICATION

Before installation, the Setup Wizard checks the update servers of Kaspersky Lab for a newer version of Kaspersky Internet Security.

If the Setup Wizard does not detect any newer version of the application on Kaspersky Lab update servers, it starts installing the current version.

If the Setup Wizard detects a newer version of Kaspersky Internet Security on Kaspersky Lab update servers, it prompts you to download and install it on your computer. It is recommended that you install the new version of the application, because newer versions include more enhancements that allow you to ensure more reliable protection of your computer. If you refuse to install the new version, the Wizard starts installing the current version of the application. If you agree to install the new version of the application, the Setup Wizard copies the files from the installation package to your computer and starts installing the new version.

## STEP 2. STARTING INSTALLATION OF THE APPLICATION

During this step, the Setup Wizard offers to install the application.

To proceed with installation, click the **Install** button.

Depending on the installation type and the localization language, during this step the Setup Wizard may prompt you to view the License Agreement concluded between you and Kaspersky Lab, as well as ask whether you want to participate in Kaspersky Security Network.

## STEP 3. REVIEWING THE LICENSE AGREEMENT

This step of the Setup Wizard is displayed for some localization languages when installing Kaspersky Internet Security from an installation package downloaded from the Internet.

During this step, the Setup Wizard asks you to review the License Agreement concluded between you and Kaspersky Lab.

Read the License Agreement thoroughly and, if you agree with all of its terms, click the **Accept** button. Installation of the application to your computer then continues.

If the terms of the License Agreement are not accepted, the application will not be installed.

## STEP 4. KASPERSKY SECURITY NETWORK STATEMENT

During this step, the Setup Wizard invites you to participate in Kaspersky Security Network. Participation in the program involves sending information about new threats detected on your computer, running applications, and downloaded signed applications, as well as information about your operating system, to Kaspersky Lab. No personal data received from you is collected, processed, or stored.

Review the Kaspersky Security Network Statement. If you accept all of its terms, in the Wizard window, click the **Accept** button.

If you do not want to participate in Kaspersky Security Network, click the **Decline** button.

After you accept or decline participation in Kaspersky Security Network, application installation continues.

## STEP 5. INSTALLATION

Some versions of Kaspersky Internet Security are distributed by subscription, and a password received from the service provider must be entered before installation.

After you enter the password, application installation starts.

Installation of the application can take some time. Wait for it to finish.

When installation is complete, the Setup Wizard automatically proceeds to the next step.

Kaspersky Internet Security performs several checks during installation. These checks may detect the following problems:

- *Non-compliance of the operating system with the software requirements.* During installation the Wizard checks the following conditions:
  - Whether the operating system and Service Pack meet the software requirements
  - Whether all of the required applications are available
  - Whether the amount of free disk space is enough for installation
  - Whether the user installing the application has administrator privileges

If any of the above-listed requirements is not met, a corresponding notification is displayed.

- *Presence of incompatible applications on the computer.* If any incompatible applications are detected, they are displayed in a list on the screen, and you will be prompted to remove them. You are advised to manually remove any applications that Kaspersky Internet Security cannot remove automatically. When removing incompatible applications, you will need to restart your operating system, after which installation of Kaspersky Internet Security continues automatically.
- *Presence of malicious programs on the computer.* If any malicious programs that interfere with installation of anti-virus software are detected on the computer, the Setup Wizard prompts you to download *Kaspersky Virus Removal Tool*, a special tool designed to neutralize infections.

If you agree to install the utility, the Setup Wizard downloads it from the Kaspersky Lab servers, after which installation of the utility starts automatically. If the Wizard cannot download the utility, you are prompted to download it on your own by clicking the link provided.

## STEP 6. COMPLETING INSTALLATION

During this step, the Wizard informs you of the completion of application installation. To start using Kaspersky Internet Security immediately, make sure that the **Run Kaspersky Internet Security** check box is selected and click the **Finish** button.

If you have cleared the **Run Kaspersky Internet Security** check box before closing the Wizard, you will have to start the application manually.

In some cases, you may need to restart your operating system to complete installation.

## STEP 7. ACTIVATING THE APPLICATION

The Activation Wizard is started at the first launch of Kaspersky Internet Security.

*Activation* is the process of making operational a fully functional version of the application for a specified period of time.

The following options for Kaspersky Internet Security activation are offered:

- **Activate application.** Select this option and enter an activation code if you have purchased a license for the application.

If you specify an activation code for Kaspersky Anti-Virus or Kaspersky Total Security in the entry field, the procedure for switching to Kaspersky Anti-Virus or Kaspersky Total Security starts after activation is completed.

- **Activate trial version of the application.** Select this activation option if you want to install the trial version of the application before making a decision on whether to purchase a license. You will be able to use the application and all of its features during a short evaluation period. When the trial license expires, the trial version of the application cannot be activated for a second time.

An Internet connection is required for activation of the application.

During application activation, you may have to register on My Kaspersky portal.

## STEP 8. REGISTERING A USER

This step is not available in all versions of Kaspersky Internet Security.

Registered users are able to send requests to Technical Support and the Virus Lab through My Kaspersky portal, manage activation codes conveniently, and receive the latest information about new applications and special offers from Kaspersky Lab.

If you agree to register, specify your registration data in the corresponding fields and click the **Next** button to send the data to Kaspersky Lab.

In some cases user registration is required to start using the application.

## STEP 9. COMPLETING ACTIVATION

The Wizard informs you that Kaspersky Internet Security has been successfully activated. In addition, information about the current license is provided in this window: the license expiration date and number of computers covered by the license.

If you have ordered a subscription, information about the subscription status is displayed instead of the license expiration date.

Click the **Finish** button to close the Wizard.

## INSTALLING THE APPLICATION FROM THE COMMAND PROMPT

You can install Kaspersky Internet Security from the command prompt.

Command prompt syntax:

```
<path to the file of the installation package> [parameters]
```

Detailed instructions and a list of installation settings are available on the Technical Support website (<http://support.kaspersky.com/12002>).

## GETTING STARTED

In order for Kaspersky Internet Security to fully support web browsers, the Kaspersky Protection extension has to be installed and enabled in web browsers.

Kaspersky Internet Security uses the Kaspersky Protection extension to embed a script into the web page opened in Protected Browser. The application uses this script to interact with the web page.

The Kaspersky Protection extension is installed in the following web browsers:

- Microsoft Internet Explorer 8.0, 9.0, 10.0, and 11.0

Internet Explorer 10 and Internet Explorer 11 browsers with the new Windows user interface are not supported.

- Mozilla™ Firefox™ 31.x and later
- Google Chrome™ 36.x and later

Kaspersky Internet Security supports Google Chrome 37.x and 38.x both in 32-bit and in 64-bit operating systems.

The Kaspersky Protection extension is installed in web browsers during installation of Kaspersky Internet Security.

After installing Kaspersky Internet Security, you have to enable the Kaspersky Protection extension:

- To enable the extension in the Mozilla Firefox web browser, you have to allow installation of the extension in the web browser window.
- In the Google Chrome web browser, you have to allow the Kaspersky Protection extension to be enabled. If you refuse to enable the extension, you will later need to install and enable the Kaspersky Protection extension manually by installing it from the Chrome™ web store or from the page on the Technical Support website (<http://support.kaspersky.com/interactive/google/en/kis2016plugin>).

In the Microsoft Internet Explorer web browser, the Kaspersky Protection extension is enabled automatically.

## UPGRADING A PREVIOUS VERSION OF THE APPLICATION

### Installing a new version of Kaspersky Internet Security over a previous version of Kaspersky Internet Security

If an earlier version of Kaspersky Internet Security is already installed on your computer, you can upgrade it to the latest version of Kaspersky Internet Security. If you have a current license for an earlier version of Kaspersky Internet Security, you do not need to activate the application: the Setup Wizard will automatically retrieve information about the license for the previous version of Kaspersky Internet Security and apply it during installation of the new version of Kaspersky Internet Security.

### Installing a new version of Kaspersky Internet Security over a previous version of Kaspersky Anti-Virus

If you install a new version of Kaspersky Internet Security on a computer on which a previous version of Kaspersky Anti-Virus has been already installed with a current license, the Activation Wizard prompts you to select one of the following options:

- Continue using Kaspersky Anti-Virus under the current license. In this case, the Migration Wizard will be started. When the Migration Wizard finishes, the new version of Kaspersky Anti-Virus will be installed to your computer. You can use Kaspersky Anti-Virus until the license for the previous version of Kaspersky Anti-Virus expires.
- Proceed with installation of the new version of Kaspersky Internet Security. In this case, the application is installed and activated according to the standard scenario.

Kaspersky Internet Security will be installed to your computer in interactive mode using the Setup Wizard.

The Wizard consists of a series of pages (steps), which you can navigate through by clicking the **Back** and **Next** buttons. To close the Wizard after it finishes, click the **Finish** button. To stop the Wizard's activity at any step of installation, close the Wizard window.

If the application will be used to protect more than one computer (with the maximum number of computers defined by the terms of the End User License Agreement), the installation procedure will be identical on all computers.

➤ *To install Kaspersky Internet Security on your computer:*

On the installation CD, run the file with the .exe extension.

In some regions, the installation CD does not include the application installation package. The installation CD contains only the autorun file. When this file is executed, the application download window opens. Click the **Download and Install** button in the application download window. Kaspersky Internet Security is downloaded from the Internet and installed. If the download failed, click the **Download and install manually from website** link that will take you to a website where you can download the application manually.

The application is then installed with the help of a standard Setup Wizard.

To install Kaspersky Internet Security, you can also download an installation package from the Internet. In this case, the Setup Wizard displays several additional installation steps for some localization languages.

Along with the application, plug-ins for web browsers are installed to ensure safe Internet browsing.

When you run audio and video recording or playback applications for the first time since installation of Kaspersky Internet Security, audio and video playback or recording may be interrupted. This is necessary in order to enable protection of application access to sound recording devices (see the section "About access by applications to sound recording devices" on page [85](#)). The system service that controls audio hardware is restarted during installation of the application.

Certain limitations apply to the upgrade from the previous version (see the section "Limitations and warnings" on page [109](#)).

**IN THIS SECTION**

Step 1. Checking for a newer version of the application ..... [25](#)  
 Step 2. Starting installation of the application..... [25](#)  
 Step 3. Reviewing the License Agreement..... [25](#)  
 Step 4. Kaspersky Security Network Statement..... [26](#)  
 Step 5. Installation..... [26](#)  
 Step 6. Completing installation..... [27](#)

**STEP 1. CHECKING FOR A NEWER VERSION OF THE APPLICATION**

Before installation, the Setup Wizard checks the update servers of Kaspersky Lab for a newer version of Kaspersky Internet Security.

If the Setup Wizard does not detect any newer version of the application on Kaspersky Lab update servers, it starts installing the current version.

If the Setup Wizard detects a newer version of Kaspersky Internet Security on Kaspersky Lab update servers, it prompts you to download and install it on your computer. It is recommended that you install the new version of the application, because newer versions include more enhancements that allow you to ensure more reliable protection of your computer. If you refuse to install the new version, the Wizard starts installing the current version of the application. If you agree to install the new version of the application, the Setup Wizard copies the files from the installation package to your computer and starts installing the new version.

**STEP 2. STARTING INSTALLATION OF THE APPLICATION**

During this step, the Setup Wizard offers to install the application.

To proceed with installation, click the **Install** button.

Depending on the installation type and the localization language, during this step the Setup Wizard may prompt you to view the License Agreement concluded between you and Kaspersky Lab, as well as ask whether you want to participate in Kaspersky Security Network.

**STEP 3. REVIEWING THE LICENSE AGREEMENT**

This step of the Setup Wizard is displayed for some localization languages when installing Kaspersky Internet Security from an installation package downloaded from the Internet.

During this step, the Setup Wizard asks you to review the License Agreement concluded between you and Kaspersky Lab.

Read the License Agreement thoroughly and, if you agree with all of its terms, click the **Accept** button. Installation of the application to your computer then continues.

If the terms of the License Agreement are not accepted, the application will not be installed.

## STEP 4. KASPERSKY SECURITY NETWORK STATEMENT

During this step, the Setup Wizard invites you to participate in Kaspersky Security Network. Participation in the program involves sending information about new threats detected on your computer, running applications, and downloaded signed applications, as well as information about your operating system, to Kaspersky Lab. No personal data received from you is collected, processed, or stored.

Review the Kaspersky Security Network Statement. If you accept all of its terms, in the Wizard window, click the **Accept** button.

If you do not want to participate in Kaspersky Security Network, click the **Decline** button.

After you accept or decline participation in Kaspersky Security Network, application installation continues.

## STEP 5. INSTALLATION

Some versions of Kaspersky Internet Security are distributed by subscription, and a password received from the service provider must be entered before installation.

After you enter the password, application installation starts.

Installation of the application can take some time. Wait for it to finish.

When installation is complete, the Setup Wizard automatically proceeds to the next step.

Kaspersky Internet Security performs several checks during installation. These checks may detect the following problems:

- *Non-compliance of the operating system with the software requirements.* During installation the Wizard checks the following conditions:
  - Whether the operating system and Service Pack meet the software requirements
  - Whether all of the required applications are available
  - Whether the amount of free disk space is enough for installation
  - Whether the user installing the application has administrator privileges

If any of the above-listed requirements is not met, a corresponding notification is displayed.

- *Presence of incompatible applications on the computer.* If any incompatible applications are detected, they are displayed in a list on the screen, and you will be prompted to remove them. You are advised to manually remove any applications that Kaspersky Internet Security cannot remove automatically. When removing incompatible applications, you will need to restart your operating system, after which installation of Kaspersky Internet Security continues automatically.
- *Presence of malicious programs on the computer.* If any malicious programs that interfere with installation of anti-virus software are detected on the computer, the Setup Wizard prompts you to download *Kaspersky Virus Removal Tool*, a special tool designed to neutralize infections.

If you agree to install the utility, the Setup Wizard downloads it from the Kaspersky Lab servers, after which installation of the utility starts automatically. If the Wizard cannot download the utility, you are prompted to download it on your own by clicking the link provided.

## STEP 6. COMPLETING INSTALLATION

During this step, the Wizard informs you of the completion of application installation.

Restart the operating system after the application has been installed.

If the **Run Kaspersky Internet Security** check box is selected, the application will be started automatically after you restart your computer.

If you have cleared the **Run Kaspersky Internet Security** check box before closing the Wizard, you will have to start the application manually.

## SWITCHING FROM KASPERSKY INTERNET SECURITY TO KASPERSKY TOTAL SECURITY

Kaspersky Internet Security allows you to switch to Kaspersky Total Security without any additional downloads or installation of software.

Kaspersky Total Security offers a number of additional features in comparison with Kaspersky Internet Security:

- **Backup and Restore.** Scheduled backup functionality lets you save your data on removable and network drives or in Online storage.
- **Identity Privacy Safeguards.** Data Encryption protects your identity data. You can place your files in a data vault and lock it to prevent unauthorized access to the files.
- **Password protection.** Kaspersky Password Manager protects your online credentials. It lets you save the names of your accounts and passwords in a vault and automatically fill out entry fields in web forms.
- **Manage Your Kaspersky Devices.** Manage Your Kaspersky Devices functionality lets you manage protection of your computers remotely.

You can temporarily switch to the trial version of Kaspersky Total Security to try out the application's features, or purchase a license and start using Kaspersky Total Security.

### IN THIS SECTION

Temporary use of Kaspersky Total Security.....	<a href="#">27</a>
Switching to permanent use of Kaspersky Total Security.....	<a href="#">28</a>

## TEMPORARY USE OF KASPERSKY TOTAL SECURITY

You can temporarily switch to the trial version of Kaspersky Total Security in order to evaluate its features. After that, you can choose to purchase a license for further use of the application.

➤ *To temporarily switch to the trial version of Kaspersky Total Security:*

1. Open the main application window.
2. Click the **Additional Tools** button in the lower part of the window to open the **Tools** window.
3. In the **Tools** window, click the **Switch to Kaspersky Total Security** link to start the migration wizard.
4. In the migration wizard window that opens, click the **Trial version** button.
5. Follow the wizard's instructions.

When used in certain regions or by subscription, Kaspersky Anti-Virus does not allow switching to the trial version of Kaspersky Total Security. In such cases, the **Switch to Kaspersky Total Security** link is not displayed.

### Step 1. Starting the upgrade

At this step, the wizard displays a message, informing you that all prerequisites for migration to the trial version of Kaspersky Total Security are met. To proceed with the wizard, click the **Continue** button.

### Step 2. Removing incompatible applications

At this step, the wizard checks if any applications incompatible with Kaspersky Total Security are installed on your computer. If no such applications are found, the wizard automatically proceeds to the next step. If such applications are found, the wizard lists them in the window and prompts you to uninstall them.

After incompatible applications are uninstalled, you may need to restart the operating system. After a restart, the wizard starts automatically, and the migration to the trial version of Kaspersky Total Security continues.

### Step 3. Switching to the trial version of Kaspersky Total Security

At this step, the wizard prepares Kaspersky Total Security components for use, which may take some time. As soon as the process completes, the wizard automatically proceeds to the next step.

### Step 4. Restarting the application

At this step of the migration to the trial version of Kaspersky Total Security, you must quit the application and start it again. To do this, in the wizard window, click the **Finish** button.

### Step 5. Completing activation

After the application is restarted, the **Licensing** window of Kaspersky Total Security opens, showing information about the length of time during which you can use the trial version.

If your Kaspersky Internet Security license has not expired at the time when you switch to Kaspersky Total Security, you can continue using Kaspersky Internet Security under this license on a different computer.

## SWITCHING TO PERMANENT USE OF KASPERSKY TOTAL SECURITY

If you want to switch to permanent use of Kaspersky Total Security, you must purchase a license for Kaspersky Total Security and then activate the application (see the section "Activating the application" on page [37](#)).

➤ *To purchase a license for Kaspersky Total Security:*

1. Open the main application window.
2. Click the **Additional Tools** button in the lower part of the window to open the **Tools** window.
3. Click the **Switch to Kaspersky Total Security** link to start the migration wizard.
4. Click the **Purchase activation code** link to go to the website of the Kaspersky Lab eStore or a partner company on which you can purchase a license for Kaspersky Total Security.

When used in certain regions or by subscription, Kaspersky Anti-Virus does not allow switching to the trial version of Kaspersky Total Security. In such cases, the **Switch to Kaspersky Total Security** link is not displayed.

# REMOVING THE APPLICATION

After removing Kaspersky Internet Security, your computer and private data will be unprotected.

Kaspersky Internet Security is uninstalled with the help of the Setup Wizard.

➤ *To start the Wizard:*

In the **Start** menu, select **All Programs** → **Kaspersky Internet Security** → **Remove Kaspersky Internet Security**.

## IN THIS SECTION

Step 1. Entering the password to remove the application .....	<a href="#">29</a>
Step 2. Saving data for future use .....	<a href="#">29</a>
Step 3. Confirming application removal.....	<a href="#">30</a>
Step 4. Removing the application. Completing removal.....	<a href="#">30</a>

## STEP 1. ENTERING THE PASSWORD TO REMOVE THE APPLICATION

To remove Kaspersky Internet Security, you must enter the password for accessing the application settings. If you cannot specify the password, for any reason, application removal will be prohibited.

This step is displayed only if a password has been set for application removal.

## STEP 2. SAVING DATA FOR FUTURE USE

During this step you can specify which of the data used by the application you want to keep for further use during the next installation of the application (for example, when installing a newer version of the application).

By default, the application offers to save information about the license.

➤ *To save data for further use, select the check boxes next to the types of data that you want to save:*

- **License information** is a set of data that rules out the need to activate the application during future installation, by allowing you to use it under the current license unless the license expires before you start the installation.
- **Quarantine files** are files scanned by the application and moved to Quarantine.

After Kaspersky Internet Security is removed from the computer, quarantined files become unavailable. To perform operations with these files, Kaspersky Internet Security must be installed.

- **Operational settings of the application** are the values of the application settings selected during configuration.

Kaspersky Lab does not guarantee support for previous application version settings. After the new version is installed, we recommend checking the correctness of its settings.

You can also export protection settings at the command prompt, by using the following command:

```
avp.com EXPORT <file_name>
```

- **iChecker data** are files that contain information about objects that have already been scanned using iChecker technology.
- **Anti-Spam databases** are databases containing specimens of spam messages added by the user.
- **Data Encryption** are files placed in storage using Data Encryption functionality.

### STEP 3. CONFIRMING APPLICATION REMOVAL

Since removing the application threatens the security of your computer and private data, you will be asked to confirm your intention to remove the application. To do this, click the **Remove** button.

### STEP 4. REMOVING THE APPLICATION. COMPLETING REMOVAL

During this step, the Wizard removes the application from your computer. Wait until removal is complete.

After you remove Kaspersky Internet Security, you can specify the reason why you decided to remove the application by leaving a comment on the Kaspersky Lab website. To do this, visit the Kaspersky Lab website, by clicking the **Complete form** button.

This functionality may be unavailable in some regions.

During removal of the application, you must restart your operating system. If you cancel an immediate restart, completion of the removal procedure is postponed until the operating system is restarted or the computer is turned off and then started up.

# APPLICATION LICENSING

This section covers the main aspects of application licensing.

## IN THIS SECTION

---

About the End User License Agreement .....	<a href="#">31</a>
About the license.....	<a href="#">31</a>
About limited functionality mode.....	<a href="#">32</a>
About the activation code.....	<a href="#">34</a>
About the subscription.....	<a href="#">34</a>
About data provision .....	<a href="#">35</a>
Purchasing a license .....	<a href="#">37</a>
Activating the application.....	<a href="#">37</a>
Renewing a license .....	<a href="#">38</a>

## ABOUT THE END USER LICENSE AGREEMENT

The End User License Agreement is a binding agreement between you and Kaspersky Lab ZAO, stipulating the terms on which you may use the application.

**Read through the terms of the License Agreement carefully before you start using the application.**

It is deemed that you accept the terms of the License Agreement by confirming that you agree with the License Agreement when installing the application. If you do not accept the terms of the License Agreement, you must abort application installation and not use the application.

## ABOUT THE LICENSE

A *license* is a time-limited right to use the application, granted under the End User License Agreement. The license is related to the unique code that you have for activating your copy of Kaspersky Internet Security.

A license entitles you to the following kinds of services:

- The right to use the application on one or several devices

The number of devices on which you may use the application is specified in the End User License Agreement.

- Assistance from Kaspersky Lab Technical Support
- Other services available from Kaspersky Lab or its partners during the term of the license (see the section "Service for users" on page [17](#))

To operate the application, you must purchase a license for application use.

The license has a limited term. License expiration may be followed by a grace period during which you may use all application features without limitations.

If you have not renewed your license (see the section "Renewing a license" on page 38), the application may switch to limited protection mode (see the section "About limited functionality mode" on page 32) when the grace period expires. Some application features are unavailable in limited protection mode. The duration of limited protection mode depends on your region and licensing terms. When limited protection mode expires, all application features become unavailable. You may find information about the grace period and limited functionality mode in the **Licensing** window, which opens by clicking the **License** link in the lower part of the main window.

We recommend renewing the license before it expires, in order to ensure maximum protection of your computer against all security threats.

Before purchasing a license, you can get a free trial version of Kaspersky Internet Security. The trial version of Kaspersky Internet Security remains functional during a short evaluation period. After the evaluation period expires, all the features of Kaspersky Internet Security are disabled. To continue using the application, you must purchase a license.

If you do not wish to renew protection of your computer, you can remove Kaspersky Internet Security (see the section "Removing the application" on page 29).

## ABOUT LIMITED FUNCTIONALITY MODE

The table below shows which Kaspersky Internet Security features are available and which are unavailable when the application is in limited functionality mode. If the value in the Limited functionality mode column is "yes", this means that the relevant functionality is available in limited functionality mode. If the value in the Limited functionality mode column is "no", the relevant functionality is unavailable. Additional information is available in the Restrictions column.

Table 2. Kaspersky Internet Security functionality in limited functionality mode

FUNCTIONALITY	RESTRICTIONS	LIMITED FUNCTIONALITY MODE
File Anti-Virus		yes
Virus scan	Scan can be started manually. Scheduled scan and scan settings are unavailable.	yes
Vulnerability scan		no
Update databases and program modules	Settings cannot be configured.	yes
Protection against adware and spyware		yes
Web Anti-Virus	Works without restrictions.	yes
Mail Anti-Virus	Works without restrictions.	yes
IM Anti-Virus	Works without restrictions.	yes
Heuristic analysis	Works without restrictions.	yes
Protection against rootkits		no
Automatic Exploit Prevention		no
System Watcher		no
Protection against phishing		yes
Checking of the reputation of files and links in Kaspersky Security Network	Works without restrictions.	yes

FUNCTIONALITY	RESTRICTIONS	LIMITED FUNCTIONALITY MODE
Connection to Kaspersky Lab web services	Works without restrictions.	yes
Kaspersky URL Advisor		no
Secure Keyboard Input		no
Rescue Disk	Can be downloaded via the application interface.	yes
Password protection of application settings	Works without restrictions.	yes
Performance	Application performance settings can be configured.	yes
Task Manager	Task Manager only displays the scan results without providing tools for controlling the scan or its settings.	yes
Gaming Profile	Works without restrictions.	yes
Threats and Exclusions	Works without restrictions.	yes
Self-Defense	Works without restrictions.	yes
Quarantine	Works without restrictions.	yes
Notifications	Only the setting that controls delivery of Kaspersky Lab advertisements can be configured.	yes
"Protect a Friend"	All features of participation in the Protect a Friend program are available.	yes
Configuration of application appearance	Works without restrictions.	yes
My Kaspersky Account		yes
Microsoft Windows Troubleshooting	Works without restrictions.	yes
Application Control		no
Firewall		no
Network Monitor		no
Network Attack Blocker		no
Anti-Spam		no
Anti-Banner		no
Safe Money		no
Safe Search		no
Private Browsing		no
Privacy Cleaner		no

FUNCTIONALITY	RESTRICTIONS	LIMITED FUNCTIONALITY MODE
Parental Control		no
Webcam access protection		no
Notification about connection to an unsafe Wi-Fi network		no
Microsoft Windows Troubleshooting		no
System Changes Control		no

## ABOUT THE ACTIVATION CODE

An *activation code* is a code that you receive when you purchase a license for Kaspersky Internet Security. This code is required for activation of the application.

The activation code is a unique sequence of twenty digits and Latin letters in the format xxxxx-xxxxx-xxxxx-xxxxx.

Depending on how you purchased the application, you can obtain the activation code in one of the following ways:

- When you purchase a boxed version of Kaspersky Internet Security, an activation code is provided in the manual or on the retail box that contains the installation CD.
- When you purchase Kaspersky Internet Security from an online store, an activation code is emailed to the address that you have specified when ordering.
- If you participate in the Protect a Friend program (see the section "Participating in the Protect a Friend program" on page 99), you can receive a bonus activation code in exchange for your bonus points.

The license term countdown starts from the date when you activate the application. If you have purchased a license for the use of Kaspersky Internet Security on several devices, the license term starts counting down from the moment you first apply the activation code.

If you lose or accidentally delete your activation code after activating the application, contact Kaspersky Lab Technical Support to restore the activation code (<http://support.kaspersky.com>).

## ABOUT THE SUBSCRIPTION

A *subscription to Kaspersky Internet Security* establishes use of the application within the selected parameters (expiration date and number of protected devices). You can obtain a subscription for Kaspersky Internet Security from a service provider (for example, from your Internet provider). You can pause or resume your subscription, renew it automatically, or cancel it. You can manage your subscription via your personal account page on the service provider's website.

Vendors can provide two types of subscriptions for Kaspersky Internet Security: update subscriptions and update and protection subscriptions.

A subscription can be limited (for example, to one year) or unlimited (with no expiration date). To continue using Kaspersky Internet Security after a limited subscription expires, you must renew it. Unlimited subscriptions are renewed automatically as long as timely prepayment has been made to the service provider.

When a limited subscription expires, you are given a grace period to renew your subscription. Application functionality remains unchanged during this time.

If the subscription is not renewed before the grace period expires, Kaspersky Internet Security stops updating the application databases (in the case of update subscriptions), stops interacting with Kaspersky Security Network, and also stops protecting the computer and running scan tasks (in the case of update and protection subscriptions).

To use Kaspersky Internet Security by subscription, apply the activation code received from your service provider. In some cases, an activation code can be downloaded and applied automatically. When using the application by subscription, you cannot apply another activation code to renew your license. You can apply another activation code only when the subscription term expires.

If Kaspersky Internet Security is already in use under a current license when you register your subscription, after registration Kaspersky Internet Security will be used by subscription. The activation code that you have used to activate the application can be applied on another computer.

To cancel your subscription, contact the service provider from whom you have purchased Kaspersky Internet Security.

Depending on the subscription provider, the set of subscription management options may vary. In addition, you may not be provided with a grace period during which you can renew the subscription.

## ABOUT DATA PROVISION

To increase the protection level, you agree to automatically provide the following information to Kaspersky Lab when you accept the provisions of the License Agreement:

- Information about the checksums of processed files (MD5, sha256)
- Information required for assessing the reputations of URLs
- Statistics on use of application notifications
- Statistical data for protection against spam
- Activation data and version of Kaspersky Internet Security in use
- Information about licensing of the installed version of Kaspersky Internet Security
- Information about the types of detected threats
- Information about digital certificates currently in use and information required to verify their authenticity
- Application operation details and licenses required to configure the display of content from trusted web addresses
- Information about the installed version of the operating system, the computer name on the network and the user account
- Information related to the user's activity on the computer (date and time of the activity, initiated processes, active windows)
- Information about websites visited and search queries in the browser
- Information about the hardware and software installed on the computer

If an error occurs during installation of Kaspersky Internet Security, you agree to automatically supply Kaspersky Lab with information about the error code, the installation package that is currently in use, and your computer.

If you participate in Kaspersky Security Network (see the section "Participating in Kaspersky Security Network " on page 97), you agree to automatically send the following information related to Kaspersky Internet Security use from your computer to Kaspersky Lab:

- Information about the hardware and software installed on the computer
- Information about the anti-virus protection status of the computer, as well as about all probably infected objects and decisions made regarding those objects
- Information about applications that are downloaded and started
- Information about errors and use of the interface of Kaspersky Internet Security
- Application details, including application version, information about files of downloaded software modules, and versions of current application databases
- Information about operation of the Private Browsing component
- Information about the date and time the files were created and modified if they are at higher risk of being exploited by criminals
- Statistics about updates and connections to Kaspersky Lab servers
- Information about the currently used wireless connection
- Statistics on delays caused by Kaspersky Internet Security while the user is using applications installed on the computer
- Files that can be used by criminals to damage your computer, or fragments of such files, including files referenced by malicious links

For purposes of preventing and investigating incidents, you agree to send to Kaspersky Lab executable and non-executable trusted files, segments of random access memory, boot sectors of the operating system, and application activity reports containing:

- Information about processes and services that have been started, including checksums (MD5) of the process or service file, file name and size, path to the file, names of and paths to files accessed by the process, names and values of registry keys accessed by the process, segments of random access memory, web addresses and IP addresses accessed by the process.
- The name of the account under which the process is running, the name of the computer on which it has been started, headers of process windows, ID of antivirus databases, name of the threat detected per Kaspersky Lab classification, unique ID of the license, expiration date and type of license, version of the operating system and service packs installed on the computer, and local time.

To improve performance of Kaspersky Internet Security, you agree to submit the following information to Kaspersky Lab:

- Information about the process that is attacking Kaspersky Internet Security Self-Defense.
- ID of the process being attacked.
- ID of the event that crashed an application installed on the computer.
- Information about the operating system at the time of BSOD.
- Name of the root index file of databases, its date and time, secondary index files and their dates and times for specific update categories, names of specific files from the update categories and their checksums for databases that have been or are being downloaded.
- Information about the NativelImage file: type, name, and checksum of the file (MD5 and SHA256).
- Information about the operation of the Private Browsing component, including the web address added to or removed from the list of exclusions by the user, the attribute of a web address having been added to or removed from the list of exclusions, the ID of the component setting.
- Information about the System Watcher component.
- The ID of the category of the operating system setting being changed, the ID of the type of setting change, the name of the browser to which the setting belongs, if changes of this operating system setting have been detected.

Information to be sent to Kaspersky Lab may be stored on your computer up to 7 days after it is created. The information is removed permanently after seven days. Data items are kept in an internal protected storage. The maximum volume of data to store is 30 MB.

In addition, you agree to automatically send files (or parts of files) that are at higher risk of being exploited by intruders to do harm to the user's computer or data, to Kaspersky Lab for additional scanning.

Kaspersky Lab uses any received information in anonymized form and as general statistics only. Aggregate statistics are automatically generated from the source information that is received, and do not contain any personal data or other confidential information. The original information received is destroyed as new information is accumulated (once a year). Aggregate statistics are stored indefinitely.

## PURCHASING A LICENSE

You can purchase a license or renew an existing license. When you purchase a license, you receive an activation code that is used to activate the application (see the section "Activating the application" on page [37](#)).

➤ *To purchase a license:*

1. Open the main application window.
2. Open the **Licensing** window in one of the following ways:
  - By clicking the **License is missing** link in the lower part of the main window if the application is not activated.
  - By clicking the **License** link in the lower part of the main window if the application is activated.
3. In the window that opens, click the **Purchase activation code** button.

The web page of Kaspersky Lab eStore or a partner company opens on which you can purchase a license.

## ACTIVATING THE APPLICATION

To make use of the features of the application and its additional services, you must activate it.

If you did not activate the application during installation, you can do so later. You will be reminded about the need to activate the application by Kaspersky Internet Security messages that appear in the taskbar notification area.

➤ *To activate Kaspersky Internet Security:*

1. Open the main application window.
2. In the lower part of the main application window, click the **Enter activation code** link. The **Activation** window opens.
3. In the **Activation** window, enter the activation code in the entry field and click the **Activate** button.

An application activation request is made.

4. Enter the user's registration data.

Depending on the terms of use, the application can prompt you to log in to My Kaspersky portal. If you are not a registered user, complete the registration form to gain access to additional features.

Registered users can perform the following actions:

- Contact Technical Support and the Virus Lab.
- Manage activation codes.
- Receive information about new applications and special offers from Kaspersky Lab.

This step is not available in all versions of Kaspersky Internet Security.

5. Click the **Finish** button in the **Activation** window to complete the registration procedure.

## RENEWING A LICENSE

You can renew a license when it is about to expire. To do this, you can specify a new activation code without waiting for the current license to expire. When the current license expires, Kaspersky Internet Security is activated automatically with the extra activation code.

➡ *To specify an extra activation code for automatic renewal of the license:*

1. Open the main application window.
2. In the lower part of the main window, click the **License** link to open the **Licensing** window.
3. In the window that opens, in the **New activation code** section, click the **Enter activation code** button.
4. Enter the activation code in the corresponding fields and click the **Add** button.

Kaspersky Internet Security then sends the data to the Kaspersky Lab activation server for verification.

5. Click the **Finish** button.

The new activation code will be displayed in the **Licensing** window.

The application is automatically activated with the new activation code when the license expires. You can also activate the application manually with a new activation code, by clicking the **Activate now** button. This button is available if the application has not been activated automatically. This button is unavailable before the license expires.

If the new activation code that you specify has already been applied on this computer or on another computer, the activation date for the purpose of renewing the license is the date on which the application was first activated with this activation code.

# MANAGING APPLICATION NOTIFICATIONS

Notifications that appear in the taskbar notification area inform you of application events that require your attention. Depending on how critical the event is, you may receive the following types of notifications:

- *Critical notifications* inform you of events that have critical importance for the computer's security, such as detection of a malicious object or dangerous activity in the operating system. Windows used for critical notifications and pop-up messages are red.
- *Important notifications* inform you of events that are potentially important for the computer's security, such as detection of a probably infected object or suspicious activity in the operating system. Windows used for important notifications and pop-up messages are yellow.
- *Information notifications* inform you of events that do not have critical importance for the computer's security. Windows used for information notifications and pop-up messages are green.

If a notification is displayed on the screen, you should select one of the options that are suggested in the notification. The optimal option is the one recommended as the default by Kaspersky Lab experts. A notification can be closed automatically when the computer is restarted, when Kaspersky Internet Security is quit, or in Connected Standby mode in Windows 8. Application Control notifications are closed automatically after 500 seconds. Notifications about the startup of applications are closed after 1 hour. When a notification is closed automatically, Kaspersky Internet Security performs the default recommended action.

Notifications are not displayed during the first hour of application operation if you have purchased a computer with Kaspersky Internet Security preinstalled (OEM distribution). The application processes detected objects in accordance with the recommended actions. The results of this processing are saved in a report.

# ASSESSING COMPUTER PROTECTION STATUS AND RESOLVING SECURITY ISSUES

Problems with computer protection are symbolized by an indicator located in the upper part of the main application window. Green indicates that your computer is protected. Yellow indicates that there are protection problems and red indicates that your computer's security is at serious risk. You are advised to fix problems and security threats immediately.

Clicking the indicator in the main application window opens the **Notification Center** window (see the following figure), which contains detailed information about the status of computer protection and suggestions for how to fix the detected problems and threats.

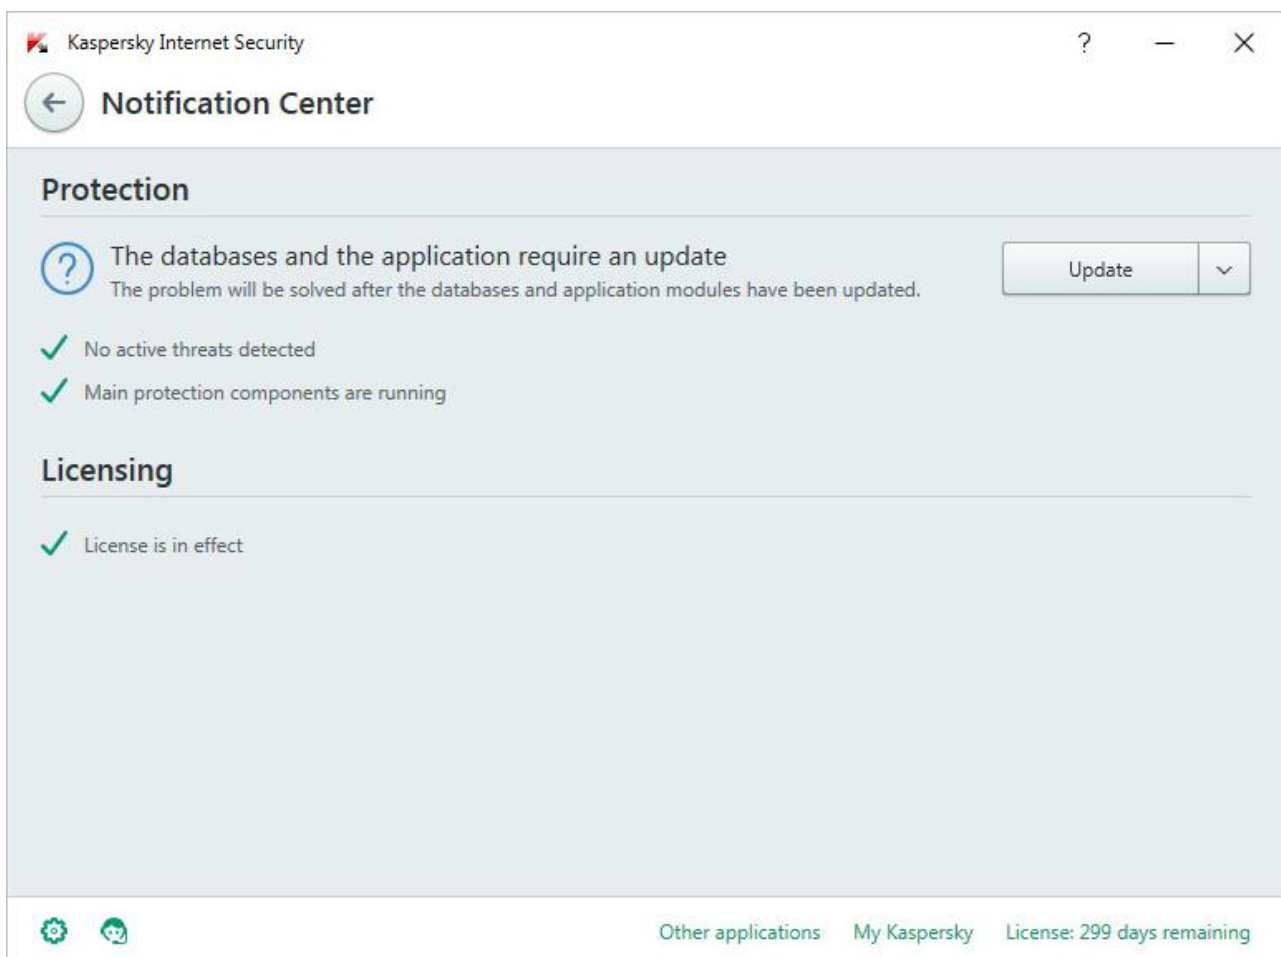

Figure 1. Notification Center window

Problems with protection are grouped by categories. For each problem, a list is displayed of actions that you can take to solve the problem.

# UPDATING DATABASES AND APPLICATION SOFTWARE MODULES

This section contains information about database and application module updates.

## IN THIS SECTION

---

About database and application module updates.....	<a href="#">41</a>
Starting an update of databases and application modules .....	<a href="#">42</a>

## ABOUT DATABASE AND APPLICATION MODULE UPDATES

The installation package of Kaspersky Internet Security includes databases and application modules. The application uses these databases to provide the *delivery security level*:

- Kaspersky Internet Security detects the majority of threats using the Kaspersky Security Network service, which requires an Internet connection.
- Kaspersky Internet Security does not detect adware, auto dialers, and other riskware that may be used by an intruder to compromise the computer or user data.

To get full protection, we recommend updating the databases and application modules as soon as the application has been installed.

Databases and program modules are updated in stages:

1. Kaspersky Internet Security starts updating databases and application modules according to the specified settings: automatically, on schedule, or on demand. The application contacts an update source that stores a database and application module update package.
2. Kaspersky Internet Security compares the existing databases with the databases available at the update source. If the databases are different, Kaspersky Internet Security downloads the missing parts of the databases.

The application then uses the updated databases and application modules to scan the computer for viruses and other threats.

You can use the following update sources:

- Kaspersky Lab update servers
- HTTP or FTP server
- Network folder

Updates of databases and application modules are subject to the following restrictions and specifics:

- Databases become outdated after two days.
- To download an update package from Kaspersky Lab servers, an Internet connection is required.

Updates of databases and application modules are unavailable in the following cases:

- The license has expired, and the grace period or limited protection mode is not available.
- A metered mobile Internet connection is used. This limitation applies on computers running under Microsoft Windows 8 or more recent versions of this operating system if automatic updates or scheduled updates are enabled and a traffic limit has been set for a metered mobile connection. If you want the application to update databases and application modules in this case, clear the **Limit traffic on metered connections** check box under **Settings** → **Additional** → **Network**.
- The application is used under subscription, and you have suspended your subscription on the website of the service provider.

## STARTING AN UPDATE OF DATABASES AND APPLICATION MODULES

➤ *To start an update of databases and application modules,*

in the context menu of the application icon located in the taskbar notification area, select the **Update** item.

➤ *To run an update of databases and application modules from the main application window:*

1. Open the main application window and click the **Update** button.

The **Update** window opens.

2. In the **Update** window, click the **Run update** button.

# SCANNING THE COMPUTER

This section provides information about how to scan your computer for viruses and other threats.

## IN THIS SECTION

---

Full Scan .....	<a href="#">43</a>
Selective Scan .....	<a href="#">43</a>
Quick Scan.....	<a href="#">45</a>
Vulnerability Scan .....	<a href="#">45</a>

## FULL SCAN

During a full scan, Kaspersky Internet Security scans the following objects by default:

- System memory
- Objects loaded on operating system startup
- Storage
- Hard drives and removable drives

We recommend running a full scan immediately after installing Kaspersky Internet Security to your computer.

➤ *To start a full scan:*

1. Open the main application window.
2. Click the **Scan** button.  
The **Scan** window opens.
3. In the **Scan** window, select the **Full Scan** section.
4. In the **Full Scan** section, click the **Run scan** button.

Kaspersky Internet Security starts a full scan of your computer.

## SELECTIVE SCAN

A Selective Scan lets you scan a file, folder, or drive for viruses and other threats.

You can start a Selective Scan in the following ways:

- From the context menu of the object
- From the main application window

➤ To start a Selective Scan from the context menu of an object:

1. Open Microsoft Windows Explorer and go to the folder that contains the object to be scanned.
2. Right-click to open the context menu of the object (see the following figure) and select **Scan for viruses**.

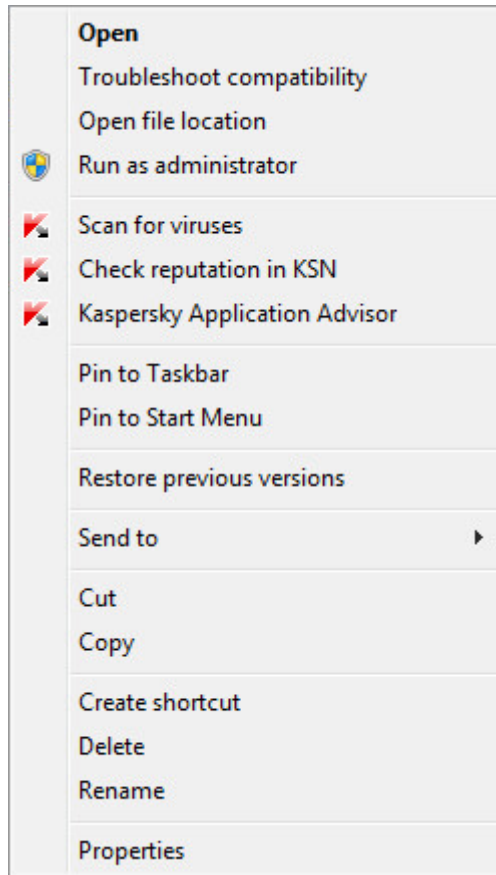

Figure 2. Object context menu

➤ To start a Selective Scan from the main application window:

1. Open the main application window.
2. Click the **Scan** button.  
The **Scan** window opens.
3. In the **Scan** window, select the **Selective Scan** section.
4. Specify objects to be scanned in one of the following ways:
  - Drag objects to the **Selective Scan** window.
  - Click the **Add** button and, in the file or folder selection window that opens, specify an object.
5. Click the **Run scan** button.

## QUICK SCAN

During a quick scan, Kaspersky Internet Security scans the following objects by default:

- Objects loaded at the startup of the operating system
- System memory
- Disk boot sectors

➔ *To start a quick scan:*

1. Open the main application window.
2. Click the **Scan** button.  
The **Scan** window opens.
3. In the **Scan** window, select the **Quick Scan** section.
4. In the **Quick Scan** section, click the **Run scan** button.

Kaspersky Internet Security starts a quick scan of your computer.

## VULNERABILITY SCAN

*Vulnerabilities* are unprotected places in software code that intruders may deliberately use for their purposes, for example, to copy the data used by applications that have unprotected code. Scanning your computer for vulnerabilities helps you to reveal any such weak points in the protection of your computer. You are advised to fix any vulnerabilities that are found.

➔ *To start a vulnerability scan:*

1. Open the main application window.
2. Click the **Additional Tools** button in the lower part of the main window to open the **Tools** window.
3. In the left part of the **Tools** window, click the **Vulnerability Scan** link to open the **Vulnerability Scan** window.
4. In the **Vulnerability Scan** window, click the **Run scan** button.

Kaspersky Internet Security starts scanning your computer for vulnerabilities.

# RESTORING AN OBJECT DELETED OR DISINFECTED BY THE APPLICATION

Kaspersky Lab recommends that you avoid restoring deleted and disinfected objects since they may pose a threat to your computer.

To restore a deleted or disinfected object, you can use the backup copy of it that was created by the application during scanning of the object.

Kaspersky Internet Security does not disinfect Windows Store apps. If scanning results indicate that such an app is dangerous, it is deleted from your computer.

When a Windows Store app is deleted, Kaspersky Internet Security does not create a backup copy of it. To restore such objects, you must use the recovery tools included with the operating system (for detailed information, see the documentation for the operating system that is installed on your computer) or update apps via the Windows Store.

➔ *To restore a file that has been deleted or disinfected by the application:*

1. Open the main application window.
2. Click the **Additional Tools** button in the lower part of the main window to open the **Tools** window.
3. In the left part of the **Tools** window, click the **Quarantine** link to open the **Quarantine** window.
4. In the **Quarantine** window that opens, select the required file from the list and click the **Restore** button.

# TROUBLESHOOTING THE OPERATING SYSTEM AFTER INFECTION

This section provides information about how to restore the operating system after it has been infected with viruses.

## IN THIS SECTION

---

Recovering the operating system after infection .....	<a href="#">47</a>
Troubleshooting the operating system by using the Microsoft Windows Troubleshooting Wizard .....	<a href="#">47</a>
About Rescue Disk.....	<a href="#">48</a>

## RECOVERING THE OPERATING SYSTEM AFTER INFECTION

If you suspect that the operating system of your computer has been corrupted or modified due to malware activity or a system failure, use the *Microsoft Windows Troubleshooting Wizard*, which clears the system of any traces of malicious objects. Kaspersky Lab recommends that you run the Wizard after the computer has been disinfected to make sure that all threats and damage caused by infections have been fixed.

The Wizard checks whether there are any changes to the system, which can include access to the network being blocked, file name extensions for known formats being changed, Control Panel being blocked, etc. There are different reasons for these different kinds of damage. These reasons may include malware activity, incorrect system configuration, system failures, or malfunctioning applications for system optimization.

After the review is complete, the Wizard analyzes the information to evaluate whether there is system damage that requires immediate attention. Based on the review, the Wizard generates a list of actions that are necessary to eliminate the damage. The Wizard groups these actions by category based on the severity of the problems detected.

## TROUBLESHOOTING THE OPERATING SYSTEM BY USING THE MICROSOFT WINDOWS TROUBLESHOOTING WIZARD

➤ *To run the Microsoft Windows Troubleshooting Wizard:*

1. Open the main application window.
2. Click the **Additional Tools** button in the lower part of the main window to open the **Tools** window.
3. In the left part of the **Tools** window, click the **Microsoft Windows Troubleshooting** link to run the Microsoft Windows Troubleshooting Wizard.

The Microsoft Windows Troubleshooting Wizard window opens.

The Wizard consists of a series of pages (steps), which you can navigate through by clicking the **Back** and **Next** buttons. To close the Wizard after it finishes, click the **Finish** button. To stop the Wizard at any stage, click the **Cancel** button.

Let us review the steps of the Wizard in more detail.

## Step 1. Starting recovery of the operating system

Make sure that the Wizard option **Search for damage caused by malware activity** is selected and click the **Next** button.

## Step 2. Problems search

The Wizard searches for problems and damage that should be fixed. When the search is complete, the Wizard proceeds automatically to the next step.

## Step 3. Select actions to fix damage

All damage found at the previous step is grouped based on the type of danger that it poses. For each damage group, Kaspersky Lab recommends a set of actions to repair the damage. There are three groups:

- *Strongly recommended actions*, which eliminate problems that pose a serious security threat. You are advised to repair all damage in this group.
- *Recommended actions* are aimed at repairing damage that may pose a threat. You are also advised to repair damage in this group.
- *Additional actions* repair system damage that is not dangerous now, but may pose a threat to the computer's security in the future.

To view damage within a group, click the ► icon to the left of the group name.

To get the Wizard to fix a specific type of damage, select the check box to the left of the damage description. By default, the Wizard fixes damage belonging to the groups of recommended and strongly recommended actions. If you do not want to fix a specific type of damage, clear the check box next to it.

It is strongly recommended that you not clear the check boxes selected by default, as doing so will leave your computer vulnerable to threats.

After you define the set of actions for the Wizard to perform, click the **Next** button.

## Step 4. Fixing damage

The Wizard performs the actions selected during the previous step. It may take a while to fix damage. After fixing damage, the Wizard automatically proceeds to the next step.

## Step 5. Wizard completion

Click the **Finish** button to close the Wizard.

# ABOUT RESCUE DISK

The rescue disk is a copy of Kaspersky Rescue Disk stored on a removable drive (a CD or USB device). You can use Kaspersky Rescue Disk for scanning and disinfecting infected computers that cannot be disinfecting using other methods (for example, with anti-virus applications).

If you have purchased a boxed version of Kaspersky Internet Security, in addition to the Kaspersky Internet Security installation package the installation CD also includes Kaspersky Rescue Disk. You can use this installation CD as a Rescue Disk.

More details on using Kaspersky Rescue Disk are available on the Technical Support website (<http://support.kaspersky.com/viruses/rescuedisk/main>).

# PROTECTING EMAIL

This section provides information about how to protect your email against spam, viruses, and other threats.

## IN THIS SECTION

---

Configuring Mail Anti-Virus.....	<a href="#">49</a>
Blocking unwanted email (spam) .....	<a href="#">50</a>

## CONFIGURING MAIL ANTI-VIRUS

Kaspersky Internet Security allows scanning email messages for dangerous objects by using Mail Anti-Virus. Mail Anti-Virus starts when the operating system is started and remains constantly in the RAM of the computer, scanning all email messages that are sent or received over the POP3, SMTP, IMAP, and NNTP protocols, as well as via encrypted connections (SSL) over the POP3, SMTP, and IMAP protocols.

By default, Mail Anti-Virus scans both incoming and outgoing messages. If necessary, you can enable scanning of incoming messages only.

➤ *To configure Mail Anti-Virus:*

1. Open the main application window.
2. Click the  button in the lower part of the window.

The **Settings** window opens.

3. In the left part of the window, in the **Protection** section, select the Mail Anti-Virus component.

The Mail Anti-Virus settings are displayed in the window.

4. Make sure that the switch in the upper part of the window that enables / disables Mail Anti-Virus, is enabled.
5. Select a security level:

- **Recommended.** If you select this security level, Mail Anti-Virus scans both incoming and outgoing messages and scans attached archives.
- **Low.** If you select this security level, Mail Anti-Virus scans incoming messages only, without scanning attached archives.
- **High.** If you select this security level, Mail Anti-Virus scans both incoming and outgoing messages and scans attached archives. When the security level is set to **High**, the application uses heuristic analysis with the **Deep scan** level of detail.

6. In the **Action on threat detection** drop-down list, select the action that you want for Mail Anti-Virus to perform when an infected object is detected (for example, disinfect).

If no threats are detected in an email message, or if all infected objects have been successfully disinfect, the message becomes available for further access. If the component fails to disinfect an infected object, Mail Anti-Virus renames or deletes the object from the message and adds a notification to the message subject line, stating that the message has been processed by Kaspersky Internet Security. Before deleting an object, Kaspersky Internet Security creates a backup copy of it and places this copy in Quarantine (see the section "Restoring an object deleted or disinfect by the application" on page [46](#)).

## BLOCKING UNWANTED EMAIL (SPAM)

If you receive large amounts of unwanted messages (spam), enable the Anti-Spam component and set the recommended security level for it.

➡ *To enable Anti-Spam and set the recommended security level:*

1. Open the main application window.
2. Click the  button in the lower part of the window.  
The **Settings** window opens.
3. In the left part of the window, select the **Protection** section.
4. In the right part of the **Protection** section, select the Anti-Spam component.  
The window displays the settings of Anti-Spam.
5. In the right part of the window, enable Anti-Spam by using the switch.
6. In the **Security level** section, make sure that the **Recommended** security level is set.

# PROTECTING PRIVATE DATA ON THE INTERNET

This section provides information about how to make your Internet browsing safe and protect your data against theft.

## IN THIS SECTION

---

About protection of private data on the Internet .....	<a href="#">51</a>
About On-Screen Keyboard .....	<a href="#">52</a>
Starting On-Screen Keyboard .....	<a href="#">53</a>
Configuring the display of the On-Screen Keyboard icon.....	<a href="#">54</a>
Protecting data entered on the computer keyboard .....	<a href="#">55</a>
Configuring notifications of vulnerabilities in Wi-Fi networks.....	<a href="#">56</a>
Protecting financial transactions and online purchases.....	<a href="#">57</a>

## ABOUT PROTECTION OF PRIVATE DATA ON THE INTERNET

Kaspersky Internet Security helps you to protect your private data against theft:

- Passwords, user names, and other registration data
- Account numbers and bank card numbers

Kaspersky Internet Security includes components and tools that allow you to protect your private data against theft by criminals who use methods such as phishing and interception of data entered on the keyboard.

Protection against phishing is provided by Anti-Phishing, which is implemented in the Web Anti-Virus, Anti-Spam, and IM Anti-Virus components. Enable these components to ensure comprehensive protection against phishing.

Protection against interception of data entered on the keyboard is provided by On-Screen Keyboard and Secure Keyboard Input.

The Privacy Cleaner Wizard clears the computer of all information about the user's activities.

Safe Money protects data when you use Internet banking services and shop on online stores.

Protection against private data transfer via the Internet is provided by one of the Parental Control tools (see the section "Using Parental Control" on page [70](#)).

## ABOUT ON-SCREEN KEYBOARD

When using the Internet, you frequently need to enter your personal data or your user name and password. This happens, for example, during account registration on websites, online shopping, and Internet banking.

There is a risk that this personal information can be intercepted by hardware keyboard interceptors or keyloggers, which are programs that record keystrokes. The On-Screen Keyboard tool prevents the interception of data entered via the keyboard.

Many programs classified as spyware can take screenshots, which then are automatically transmitted to an intruder for further analysis to steal the user's personal data. On-Screen Keyboard protects entered personal data from attempts to intercept it by means of screenshots.

On-Screen Keyboard has the following features:

- You can click the On-Screen Keyboard buttons with the mouse.
- Unlike hardware keyboards, it is impossible to press several keys simultaneously on On-Screen Keyboard. This is why key combinations (such as **ALT+F4**) require that you click the first key (for example, **ALT**), then the second key (for example, **F4**), and then the first key again. The second click of the key acts in the same way as releasing the key on a hardware keyboard.
- The On-Screen Keyboard language can be switched by using the same shortcut that is specified by the operating system settings for the hardware keyboard. To do so, right-click the other key (for example, if the **LEFT ALT+SHIFT** shortcut is configured in the operating system settings for switching the keyboard language, left-click the **LEFT ALT** key and then right-click the **SHIFT** key).

To ensure protection of data entered via On-Screen Keyboard, restart your computer after installing Kaspersky Internet Security.

The use of On-Screen Keyboard has the following limitations:

- On-Screen Keyboard prevents interception of personal data only when used with the Microsoft Internet Explorer, Mozilla Firefox, or Google Chrome browsers. When used with other browsers, On-Screen Keyboard does not protect entered personal data against interception.
- On-Screen Keyboard is not available in Microsoft Internet Explorer browser (versions 10 and 11) with the new Windows user interface style. In this case, we recommend opening On-Screen Keyboard from the interface of Kaspersky Internet Security.
- On-Screen Keyboard cannot protect your personal data if the website requiring the entry of such data is hacked, because in this case the information is obtained directly by the intruders from the website.
- On-Screen Keyboard does not prevent screenshots that are made by using the **PRINT SCREEN** key and other combinations of keys specified in the operating system settings.
- When running On-Screen Keyboard, the AutoComplete feature of Microsoft Internet Explorer stops functioning, since the implementation of the automatic input scheme may allow criminals to intercept data.
- Kaspersky Internet Security does not provide protection against unauthorized screenshots in Microsoft Windows 8 and 8.1 (64-bit only) if the On-Screen Keyboard window is open but the Protected Browser process is not started.
- In some browsers (such as Google Chrome), protection of data input may not work for certain types of data (such as email addresses or numbers).

The preceding list describes the main restrictions in functionality for protection of data input. A full list of restrictions is given in an article on the Kaspersky Lab Technical Support website (<http://support.kaspersky.com/12000>).

## STARTING ON-SCREEN KEYBOARD

You can open On-Screen Keyboard in the following ways:

- From the context menu of the application icon in the taskbar notification area
- From the main application window
- From the window of Microsoft Internet Explorer, Mozilla Firefox, or Google Chrome, by clicking the On-Screen Keyboard quick access icon
- By using the quick launch icon of On-Screen Keyboard in entry fields on websites

You can configure the display of the quick launch icon in entry fields on websites (see the section "Configuring the display of the On-Screen Keyboard icon" on page [54](#)).

When On-Screen Keyboard is used, Kaspersky Internet Security disables the autofill option for entry fields on websites.

- By pressing a combination of keyboard keys

➤ To open On-Screen Keyboard from the context menu of the application icon in the taskbar notification area:

Select **Tools** → **On-Screen Keyboard** (see figure below).

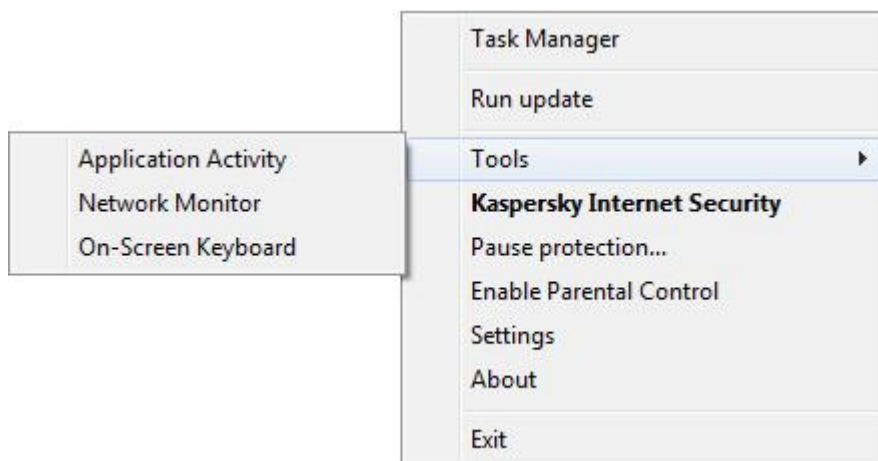

Figure 3. Kaspersky Internet Security context menu

➤ To open On-Screen Keyboard from the main application window:

1. Open the main application window.
2. Click the **Additional Tools** button in the lower part of the main window to open the **Tools** window.
3. In the left part of the **Tools** window, click the **On-Screen Keyboard** link to open On-Screen Keyboard.

➤ To open On-Screen Keyboard from the window of the Google Chrome, Microsoft Internet Explorer or Mozilla Firefox browser:

1. Click the  **Kaspersky Protection** button on the browser toolbar.
2. Select the **On-Screen Keyboard** item in the menu that opens.

➤ To open the On-Screen Keyboard by using the hardware keyboard:

Press the shortcut **CTRL+ALT+SHIFT+P**.

# CONFIGURING THE DISPLAY OF THE ON-SCREEN KEYBOARD ICON

➔ To configure display of the quick launch icon of On-Screen Keyboard in entry fields on websites:

1. Open the main application window.
2. Click the  button in the lower part of the window.
3. In the **Settings** window that opens, in the **Additional** section, select the **Secure Data Input** subsection.

The window displays the settings for secure data input.

4. If necessary, in the **On-Screen Keyboard** section, select the **Open On-Screen Keyboard by typing CTRL+ALT+SHIFT+P** check box.
5. If you want the On-Screen Keyboard quick launch icon to be displayed in entry fields on all websites, select the **Show quick launch icon in data entry fields** check box.
6. If you want the On-Screen Keyboard quick launch icon to be displayed only when specified websites are accessed:
  - a. In the **On-Screen Keyboard** section, click the **Edit categories** link to open the **Secure Data Input settings** window.
  - b. Select the check boxes for categories of websites on which you want the On-Screen Keyboard quick launch icon to be displayed in entry fields.

The On-Screen Keyboard quick launch icon is displayed when a website that belongs to any of the selected categories is accessed.

- c. If you want to enable or disable display of the On-Screen Keyboard quick launch icon on a specific website:
  - a. Click the **Configure exclusions** link to open the **Exclusions for On-Screen Keyboard** window.
  - b. In the lower part of the window, click the **Add** button.

A window opens for adding an exclusion for On-Screen Keyboard.
  - c. In the **URL mask** field, enter the web address of a website.
  - d. In the **Scope** section, specify where you want the On-Screen Keyboard quick launch icon to be displayed (or not to be displayed): on the specified page or on all pages of the website.
  - e. In the **On-Screen Keyboard icon** section, specify whether or not you want the On-Screen Keyboard quick launch icon to be displayed.
  - f. Click the **Add** button.

The specified website appears in the list in the **Exclusions for On-Screen Keyboard** window.

When the specified website is accessed, the On-Screen Keyboard quick launch icon is displayed in the entry fields in accordance with the specified settings.

# PROTECTING DATA ENTERED ON THE COMPUTER

## KEYBOARD

Protection of data input on the computer keyboard allows avoiding interception of data that is entered via the keyboard.

Secure Keyboard Input has the following limitations:

- Protection of data input from the computer keyboard is available only for the Microsoft Internet Explorer, Mozilla Firefox, and Google Chrome browsers. When using other web browsers, data entered via the computer keyboard is not protected from interception.
- Secure Keyboard Input is not available in Microsoft Internet Explorer from Windows Store.
- Protection of data input from the computer keyboard cannot protect your personal data if a website that requires entering such data has been hacked, because in this case information is obtained by intruders directly from the website.
- In some browsers (such as Google Chrome), protection of data input may not work for certain types of data (such as email addresses or numbers).

The preceding list describes the main restrictions in functionality for protection of data input. A full list of restrictions is given in an article on the Kaspersky Lab Technical Support website (<http://support.kaspersky.com/12000>).

You can configure protection of data input from the computer keyboard on various websites. After protection of data input from the computer keyboard is configured, you do not have to take any additional actions when entering data.

➔ *To configure protection of data input from the computer keyboard:*

1. Open the main application window.
2. Click the  button in the lower part of the window.

The **Settings** window opens.

3. In the **Additional** section, select the **Secure Data Input** subsection.

The window displays the settings for secure data input.

4. In the lower part of the window, in the **Secure Keyboard Input** section, select the **Enable Secure Keyboard Input** check box.
5. Specify the protection scope for data input from the hardware keyboard:
  - a. Open the **Secure Data Input settings** window by clicking the **Edit categories** link in the lower part of the **Secure Keyboard Input** section.
  - b. Select the check boxes for categories of websites on which you want to protect data that is entered via the keyboard.

- c. If you want to enable or disable protection of data input from the keyboard on a specific website:
  - a. Open the **Exclusions for Secure Keyboard Input** window by clicking the **Configure exclusions** link.
  - b. In the window, click the **Add** button.
 

A window opens for adding an exclusion to Secure Keyboard Input.
  - c. In the window that opens, in the **URL mask** field, enter a website address.
  - d. Select one of the options for Secure Data Input on this website: **Apply to the specified page** or **Apply to the entire website**.
  - e. Select the action to be performed by Secure Data Input on this website: **Protect** or **Do not protect**.
  - f. Click the **Add** button.

The specified website appears in the list in the **Exclusions for Secure Keyboard Input** window. When this website is accessed, Secure Data Input will be active, functioning in accordance with the settings that you have specified.

## CONFIGURING NOTIFICATIONS OF VULNERABILITIES IN WI-FI NETWORKS

When you are connected to a Wi-Fi network, your confidential data may be stolen if that network is protected poorly. Kaspersky Internet Security checks Wi-Fi networks every time you connect to one. If the Wi-Fi network is not secure (for example, a vulnerable encryption protocol is used, or the name of the Wi-Fi network (SSID) is very popular), the application displays a notification informing you that you are about to connect to an insecure Wi-Fi network. Click the link in the notification window to learn how to safely use the Wi-Fi network.

➤ *To configure notifications of vulnerabilities on Wi-Fi networks:*

1. Open the main application window.
2. Click the  button in the lower part of the window.
 

The **Settings** window opens.
3. In the left part of the window, select the **Protection** section.
4. In the right part of the **Protection** section, select the **Firewall** subsection.

The window displays the settings of the Firewall component.

5. Select the **Notify of vulnerabilities in Wi-Fi networks** check box if it has been cleared. If you do not want to receive notifications, clear the check box. This check box is selected by default.
6. If the **Notify of vulnerabilities in Wi-Fi networks** check box is selected, you can edit the advanced settings for display of notifications:
  - Select the **Block and warn about insecure transmission of passwords over the Internet** check box to block all transmission of passwords in non-encrypted text format when you fill in the **Password** fields on the Internet. This check box is cleared by default.
  - Click the **Reset hidden alerts** link to roll back to the default values of settings for display of notifications about transfers of passwords in non-encrypted form. If you have previously blocked display of notifications about password transfer in non-encrypted form, display of these notifications will resume.

# PROTECTING FINANCIAL TRANSACTIONS AND ONLINE PURCHASES

To provide protection for confidential data that you enter on websites of banks and payment systems (such as bank card numbers and passwords for accessing online banking services), as well as to prevent funds from being stolen when you make online payments, Kaspersky Internet Security prompts you to open such websites in Protected Browser.

Protected Browser is a special browser operating mode designed to protect your data as you access bank or payment system websites. Protected Browser is started in an isolated environment to prevent other applications from injecting their code into the process of Protected Browser. Kaspersky Internet Security creates special profiles for the Mozilla Firefox and Google Chrome browsers to prevent third-party add-ons from affecting the operation of Protected Browser. The application does not affect your data that the browsers may save in the profiles created for them.

In Protected Browser mode, the application provides protection against the following types of threats:

- Untrusted modules. The application runs a check for untrusted modules every time you visit a bank or payment system website.
- Rootkits. The application scans for rootkits at Protected Browser startup.
- Known operating system vulnerabilities. The application scans for operating system vulnerabilities at Protected Browser startup.
- Invalid certificates of bank or payment system websites. The application checks certificates when you visit a bank or payment system website. The check is performed against a database of compromised certificates.

When you open a website in Protected Browser, a frame appears on the borders of the browser window. The color of the frame indicates the protection status.

The frame of the browser window can display the following color indications:

- Green frame. Signifies that all checks have been performed successfully. You can continue using Protected Browser.
- Yellow frame. Signifies that checks have revealed security problems that need to be resolved.

The application can detect the following threats and security problems:

- Untrusted module. Computer scanning and disinfection is required.
- Rootkit. Computer scanning and disinfection is required.
- Operating system vulnerability. Operating system updates need to be installed.
- Invalid certificate of a bank or payment system website.

If you do not eliminate the threats detected, the security of the bank or payment system website connection session is not guaranteed. Events involving the launch and use of Protected Browser with reduced protection are recorded in the Windows event log.

The yellow color of the frame may also signify that Protected Browser cannot be started due to technical limitations. For example, a third-party hypervisor is running or your computer does not support hardware virtualization technology.

To use Protected Browser, the Kaspersky Protection extension has to be installed and enabled in the web browser (see the section "Getting started" on page [23](#)). If the extension is not installed, the web browser prompts you to install it at the first startup in Protected Browser mode. If you choose not to install the Kaspersky Protection extension, you can install it later.

Protected Browser cannot be run if the **Enable Self-Defense** check box is cleared in the **Self-Defense** subsection of the **Advanced Settings** section of the application settings window.

**IN THIS SECTION**

Configuring Safe Money ..... [58](#)

Configuring Safe Money for a specific website ..... [58](#)

Enabling automatic activation of the Kaspersky Protection extension ..... [59](#)

About protection against screenshots ..... [59](#)

Enabling protection against screenshots ..... [60](#)

About clipboard data protection ..... [60](#)

Checking a website for safety ..... [60](#)

## CONFIGURING SAFE MONEY

➤ *To configure Safe Money:*

1. Open the main application window.
2. Click the  button in the lower part of the window.  
The **Settings** window opens.
3. In the left part of the window, select the **Protection** section.
4. In the right part of the **Protection** section, select the **Safe Money** subsection.  
The window displays the settings of the Safe Money component.
5. Enable Safe Money by clicking the switch in the upper part of the window.
6. To enable notifications regarding vulnerabilities detected in the operating system before running Protected Browser, select the **Notify about operating system vulnerabilities** check box.

## CONFIGURING SAFE MONEY FOR A SPECIFIC WEBSITE

➤ *To configure Safe Money for a specified website:*

1. Open the main application window.
2. Click the **Safe Money** button.  
The **Safe Money** window opens.
3. Click the **Add website to Safe Money** link to open fields for adding the website information in the right part of the window.
4. In the **Website for Safe Money** field, enter the web address of the website that you want to open in Protected Browser.

A website address must be preceded by the prefix for the HTTPS protocol (for example, <https://example.com>), which is used by default by Protected Browser.

5. Click the **Add description** link to open the **Description** field and enter the name or description of this website.
6. Select the action that you want Protected Browser to perform when you open the website:
  - If you want the website to open in Protected Browser every time you visit it, select **Run Protected Browser**.
  - If you want Kaspersky Internet Security to prompt you for an action when the website is opened, select **Prompt for action**.
  - If you want to disable Safe Money for the website, select **Do not run Protected Browser**.
7. In the right part of the window, click the **Add** button.

The website will be displayed in the list in the left part of the window.

## ENABLING AUTOMATIC ACTIVATION OF THE KASPERSKY PROTECTION EXTENSION

➡ *To enable automatic activation of the Kaspersky Protection extension:*

1. Open the main application window.
2. Click the  button in the lower part of the window.  
The **Settings** window opens.
3. In the left part of the window, select the **Protection** section.
4. In the right part of the **Protection** section, select the **Web Anti-Virus** section.
5. In the **Web Anti-Virus settings** window that opens, click the **Advanced Settings** link to open the **Advanced settings of Web Anti-Virus** window.
6. In the **Kaspersky Protection extension** section, select the **Automatically activate Kaspersky Protection extension in all web browsers** check box.

## ABOUT PROTECTION AGAINST SCREENSHOTS

To protect your data when you browse protected websites, Kaspersky Internet Security prevents spyware from taking unauthorized screenshots. Protection against screenshots is enabled by default. If protection has been disabled manually, you can enable it in the application settings window (see the section "Enabling protection against screenshots" on page [60](#)).

Kaspersky Internet Security installed on a computer running a 64-bit version of Microsoft Windows 8, Microsoft Windows 8.1 or Microsoft Windows 10, uses hypervisor technology to provide protection against screenshots.

On computers running on 64-bit Microsoft Windows 8, Microsoft Windows 8.1 or Microsoft Windows 10, the protection against screenshots that is provided by the Kaspersky Internet Security hypervisor has the following limitations:

- This feature is not available when a third-party hypervisor, such as the VMware® virtualization hypervisor, is running. After you close the third-party hypervisor, protection against screenshots becomes available again.
- The feature is not available if the CPU of your computer does not support hardware virtualization technology. For more details on whether your CPU supports hardware virtualization, please refer to the documentation shipped with your computer or to the website of the CPU manufacturer.
- The feature is not available if a third-party hypervisor (such as the VMware hypervisor) is running when you start Protected Browser.

## ENABLING PROTECTION AGAINST SCREENSHOTS

➔ To enable protection against screenshots:

1. Open the main application window.
2. Click the  button in the lower part of the window.

The **Settings** window opens.

3. In the left part of the window, select the **Protection** section.
4. In the right part of the **Protection** section, select the **Safe Money** subsection and make sure that the Safe Money switch is on.

The **Safe Money settings** window opens.

5. In the **Additional** section, select the **Block capturing screenshots in Protected Browser** check box. This check box is displayed when the application is installed on a 64-bit version of Windows 8, Windows 8.1 and Windows 10.

## ABOUT CLIPBOARD DATA PROTECTION

Kaspersky Internet Security blocks unauthorized access by applications to the clipboard when you make online payments, thus preventing theft of data by criminals. Such blocking is active only if an untrusted application attempts to obtain unauthorized access to your clipboard. If you copy data manually from the window of an application to another application's window (for example, from Notepad to a text editor window), access to clipboard is allowed. If the Internet Explorer browser opened in regular mode is the source of data being copied, only data from the browser address field can be copied to clipboard.

## CHECKING A WEBSITE FOR SAFETY

Kaspersky Internet Security allows checking the safety of a website before you click a link to open it. Websites are checked using *Kaspersky URL Advisor*.

**Kaspersky URL Advisor is not available in Microsoft Internet Explorer browser (versions 10 and 11) with the new Windows user interface style.**

Kaspersky URL Advisor checks links on the web page opened in Microsoft Internet Explorer, Google Chrome or Mozilla Firefox. Kaspersky Internet Security displays one of the following icons next to the checked link:

-  – if the web page opened by clicking the link is safe according to Kaspersky Lab
-  – if there is no information about the safety status of the web page that is opened by clicking the link
-  – if the web page opened by clicking the link is dangerous according to Kaspersky Lab.

To view a pop-up window with more details on the link, move the mouse pointer to the corresponding icon.

By default, Kaspersky Internet Security checks links in search results only. You can enable link checking on every website.

➤ To enable link checking on websites:

1. Open the main application window.

2. Click the  button in the lower part of the window.

The **Settings** window opens.

3. In the **Protection** section, select the **Web Anti-Virus** subsection.

The window displays the settings for Web Anti-Virus.

4. In the lower part of the window, click the **Advanced Settings** link. The advanced settings window of Web Anti-Virus opens.

5. In the **Kaspersky URL Advisor** section, select the **Check URLs** check box.

6. If you want Kaspersky Internet Security to scan the content of all websites, select **On all websites except those specified**.

7. If necessary, specify web pages that you trust in the **Exclusions** window. Open this window by clicking the **Configure exclusions** link. Kaspersky Internet Security does not scan the content of the specified web pages or encrypted connections with the specified websites.

8. If you want Kaspersky Internet Security to check the content of specific web pages only:

a. Select **On specified websites only**.

b. Click the **Configure checked websites** link to open the **Checked websites** window.

c. Click the **Add** button.

d. Enter the address of the web page whose content you want to check.

e. Select the checking status for the web page (if the status is *Active*, Kaspersky Internet Security checks web page content).

f. Click the **Add** button.

The specified web page appears in the list in the **Checked websites** window. Kaspersky Internet Security checks URLs on this web page.

9. To configure the advanced settings for URL checking, in the **Advanced settings of Web Anti-Virus** window, in the **Kaspersky URL Advisor** section, click the **Configure Kaspersky URL Advisor** link to open the **Kaspersky URL Advisor** window.

10. If you want Kaspersky Internet Security to notify you about the safety of links on all web pages, in the **Checked URLs** section, select **All URLs**.

11. If you want Kaspersky Internet Security to display information about whether a link belongs to a specific category of website content (for example, *Profanity*, *obscenity*):

a. Select the **Show information on the categories of website content** check box.

b. Select the check boxes next to categories of website content about which information should be displayed in comments.

Kaspersky Internet Security checks links on the specified web pages and displays information about categories of the links in accordance with the current settings.

# WEB TRACKING PROTECTION

This section provides information on how Kaspersky Internet Security can protect you against tracking of your online activity.

## IN THIS SECTION

---

About Private Browsing .....	<a href="#">62</a>
Configuring Private Browsing .....	<a href="#">63</a>
Blocking tracking services by category.....	<a href="#">63</a>
Allowing activity tracking on chosen websites .....	<a href="#">64</a>
Viewing the report on requests to tracking services .....	<a href="#">64</a>
Managing the Private Browsing component in a web browser .....	<a href="#">65</a>

## ABOUT PRIVATE BROWSING

Protection against online activity tracking is provided by the *Private Browsing* component.

When you are online, the Private Browsing component detects requests sent by the web browser to tracking services when you download pages that contain program code and HTML markup designed for tracking. Tracking services use information from these requests to analyze your activity and can use analysis results to show you relevant advertisements.

In *detection mode*, the Private Browsing component lets you view reports about requests to tracking services that have been detected. This mode is enabled by default.

In *blocking mode*, in addition to generating reports the Private Browsing component modifies requests to and responses from tracking services in a way that protects you from tracking of your online activity. *Blocking of requests* and *blocking of tracking services* hereinafter means the aforementioned modification of requests to and responses from tracking services.

You can manage the Private Browsing component directly in the web browser (see the section "Managing the Private Browsing component in a web browser" on page [65](#)).

Private Browsing has the following limitations:

- The application does not block tracking services of the "Social networks" category while you are on the website of the relevant social network.
- If the web page from which the request to the tracking service originated could not be determined, Kaspersky Internet Security does not block this tracking service and does not display information about the request sent to this service.
- If the web page from which the request to the tracking service originated could be determined but could not be matched to any web page currently open in the web browser, Kaspersky Internet Security applies to this request the action specified in the Private Browsing settings (detects or blocks it). The application displays information about this request in reports but does not include this request in the Private Browsing statistics displayed in the web browser.

## CONFIGURING PRIVATE BROWSING

➤ *To configure Private Browsing:*

1. Open the main application window.

2. Click the  button in the lower part of the window.

The **Settings** window opens.

3. In the left part of the window, select the **Protection** section.

The window with a list of protection components opens. The Private Browsing component is enabled by default.

4. To enable the Private Browsing component, flip the toggle switch opposite the **Private Browsing** component to .

5. To edit the default settings of the Private Browsing component, select the **Private Browsing** item in the right part of the window.

The **Private Browsing settings** window opens.

6. Configure the settings of Private Browsing on your computer:

- If you want the application to only detect and count requests to tracking services without blocking them, leave the **Detect requests without blocking** option that is selected by default.
- If you want the application to block requests to tracking services, select the **Block detected requests** option. Clicking the **Categories and exclusions** link opens a window in which you can specify the categories of tracking services that you want to block.

7. If you do not want the application to send to websites the HTTP header that blocks tracking of your activity, clear the **Add the "Do Not Track" header** check box. This check box is selected by default.

8. If you want to block activity tracking on websites of Kaspersky Lab and its partners, clear the **Allow data collection on the websites of Kaspersky Lab and its partners** check box. By default, Private Browsing does not block requests to tracking services on websites of Kaspersky Lab and its partners.

9. If you want to block activity tracking on websites that may be rendered inoperable as a result of such blocking, clear the **Allow data collection on incompatible websites** check box. By default, Private Browsing does not block requests to tracking services on websites that may be rendered inoperable as a result of tracking services being blocked, according to information available to Kaspersky Lab.

Kaspersky Lab updates the list of incompatible websites as incompatibility issues are resolved.

## BLOCKING TRACKING SERVICES BY CATEGORY

➤ *To configure blocking of tracking services by category:*

1. Open the main application window.

2. Click the  button in the lower part of the window.

The **Settings** window opens.

3. In the left part of the window, select the **Protection** section.

The window with a list of protection components opens. The Private Browsing component is enabled by default.

- In the right part of the window, select the **Private Browsing** component.

The **Private Browsing settings** window opens.

- Select the **Block detected requests** option.
- Click the **Categories and exclusions** link to open the **Categories and exclusions** window.
- Select the check boxes next to the categories of tracking services that the application should block.

## ALLOWING ACTIVITY TRACKING ON CHOSEN WEBSITES

➤ *To allow activity tracking on chosen websites:*

- Open the main application window.

- Click the  button in the lower part of the window.

The **Settings** window opens.

- In the left part of the window, select the **Protection** section.

The window with a list of protection components opens. The Private Browsing component is enabled by default.

- In the right part of the window, select the **Private Browsing** item.

The **Private Browsing settings** window opens.

- Select the **Block detected requests** option.
- Click the **Categories and exclusions** link to open the **Categories and exclusions** window.
- Click the **Exclusions** link to open the **Private Browsing exclusions** window.
- Click the **Add** button.
- In the window that opens, enter the address of the website on which you want to allow activity tracking, and click the **Add** button.

The specified website is added to the list of exclusions.

You can also allow activity tracking on a website while it is open in the web browser (see the section "Managing the Private Browsing component in a web browser" on page [65](#)).

## VIEWING THE REPORT ON REQUESTS TO TRACKING SERVICES

➤ *To view the report on requests to tracking services:*

- Open the main application window.
- Click the **Additional Tools** button to open the **Tools** window.
- In the **Tools** window, click the **Privacy Protection** link to open the **Privacy Protection** window.

In the **Privacy Protection** window, the **Private Browsing** section shows a consolidated report with information about the categories of tracking services and the number of requests sent to them.

- To get a detailed report on requests to tracking services that have been detected and blocked, open the **Detailed Reports** window by clicking the **Details** link in the **Private Browsing** section.

You can view the report on requests to tracking services that have been detected in a web browser (see the section "Managing the Private Browsing component in a web browser" on page [65](#)).

## MANAGING THE PRIVATE BROWSING COMPONENT IN A WEB BROWSER

You can manage the Private Browsing component directly in the web browser:

- Enable the component if it is disabled
- View statistics on requests to tracking services that have been detected
- Go to the Private Browsing settings window
- View information on which categories of tracking services are blocked
- View information on the component operation mode (see the section "About Private Browsing" on page [62](#)) and on whether or not tracking services are being blocked on the website opened in the web browser
- Change the component operation mode and allow or disallow the blocking of tracking services on the website opened in the web browser.

➡ *To manage the Private Browsing component in the web browser,*

click the  **Kaspersky Protection** button on the web browser toolbar.

The menu that opens shows information about the operation of the component and the component controls.

# ANTI-BANNER PROTECTION DURING WEBSITE BROWSING

The Anti-Banner component is designed to provide protection against banners while you browse the web. If this component is enabled, you can block banners directly on a web page or specify the website address and mask using which Kaspersky Internet Security will block banners on this website. By default, Kaspersky Internet Security provides protection against the most common types of banners.

## IN THIS SECTION

---

Enabling the Anti-Banner component.....	<a href="#">66</a>
Blocking website banners.....	<a href="#">66</a>
Blocking all website banners .....	<a href="#">67</a>

## ENABLING THE ANTI-BANNER COMPONENT

➔ *To enable the Anti-Banner component:*

1. Open the main application window.
2. Click the  button in the lower part of the window.  
The **Settings** window opens.
3. Select the **Protection** section.
4. In the right part of the window, select the Anti-Banner component and enable it by flipping on the toggle switch.

## BLOCKING WEBSITE BANNERS

➔ *To block website banners:*

1. While on a website, place the mouse pointer over the banner that you want to hide.
2. Press the **CTRL** key on the keyboard.
3. In the menu that opens, select **Add to Anti-Banner**.  
The **Blocked URLs** window opens.
4. In the **Blocked URLs** window, click the **Add** button.  
The banner URL is added to the list of blocked URLs.
5. Refresh the web page in the browser to stop the banner from showing.

The banner will not be displayed the next time you visit this web page.

## BLOCKING ALL WEBSITE BANNERS

You can block all banners on a certain website. To do so, specify the mask for this website and add it to the list of blocked web addresses.

➤ *To block all banners on a website:*

1. Open the main application window.
2. Click the  button in the lower part of the window.  
The **Settings** window opens.
3. Select the **Protection** section.
4. Select the Anti-Banner component.  
The **Anti-Banner settings** window opens.
5. Enable Anti-Banner by clicking the switch in the upper part of the window.
6. In the **Anti-Banner settings** window, click the **Configure blocked URLs** link to open the **Blocked URLs** window.
7. In the **Blocked URLs** window, click the **Add** button.
8. In the window that opens, in the **Web address mask (URL)** field enter the address mask for the website on which you want to block banners. For example: `http://example.com*`.
9. Specify **Active** as the status for this website.
10. Click the **Add** button.

Kaspersky Internet Security starts blocking banners on the <http://example.com> website.

# REMOVING TRACES OF ACTIVITY ON THE COMPUTER AND ON THE INTERNET

User actions on a computer are recorded in the operating system. The following information is saved:

- Details of search queries entered by users and websites visited
- Information about started applications, as well as opened and saved files
- Microsoft Windows event log entries
- Other information about user activity

Intruders and unauthorized persons may be able to gain access to private information contained in data on past user actions.

Kaspersky Internet Security includes the Privacy Cleaner Wizard, which cleans up traces of user activity in the operating system.

➔ *To run the Privacy Cleaner Wizard:*

1. Open the main application window.
2. Click the **Additional Tools** button in the lower part of the main window to open the **Tools** window.
3. In the left part of the **Tools** window, click the **Privacy Protection** link to open the **Privacy Protection** window.
4. In the **Privacy Protection** window, click the **Privacy Cleaner** link to run the Privacy Cleaner Wizard.

The Wizard consists of a series of pages (steps), which you can navigate through by clicking the **Back** and **Next** buttons. To close the Wizard after it finishes, click the **Finish** button. To stop the Wizard at any stage, click the **Cancel** button.

Let us review the steps of the Wizard in more detail.

## Step 1. Starting the Wizard

Make sure that the **Search for user activity traces** check box is selected. Click the **Next** button to start the Wizard.

## Step 2. Activity traces search

This Wizard searches for traces of activity on your computer. The search may take a while. When the search is complete, the Wizard proceeds automatically to the next step.

### Step 3. Selecting Privacy Cleaner actions

When the search is complete, the wizard informs you about the detected activity traces and asks about the actions to take for elimination of these activity traces (see the following figure).

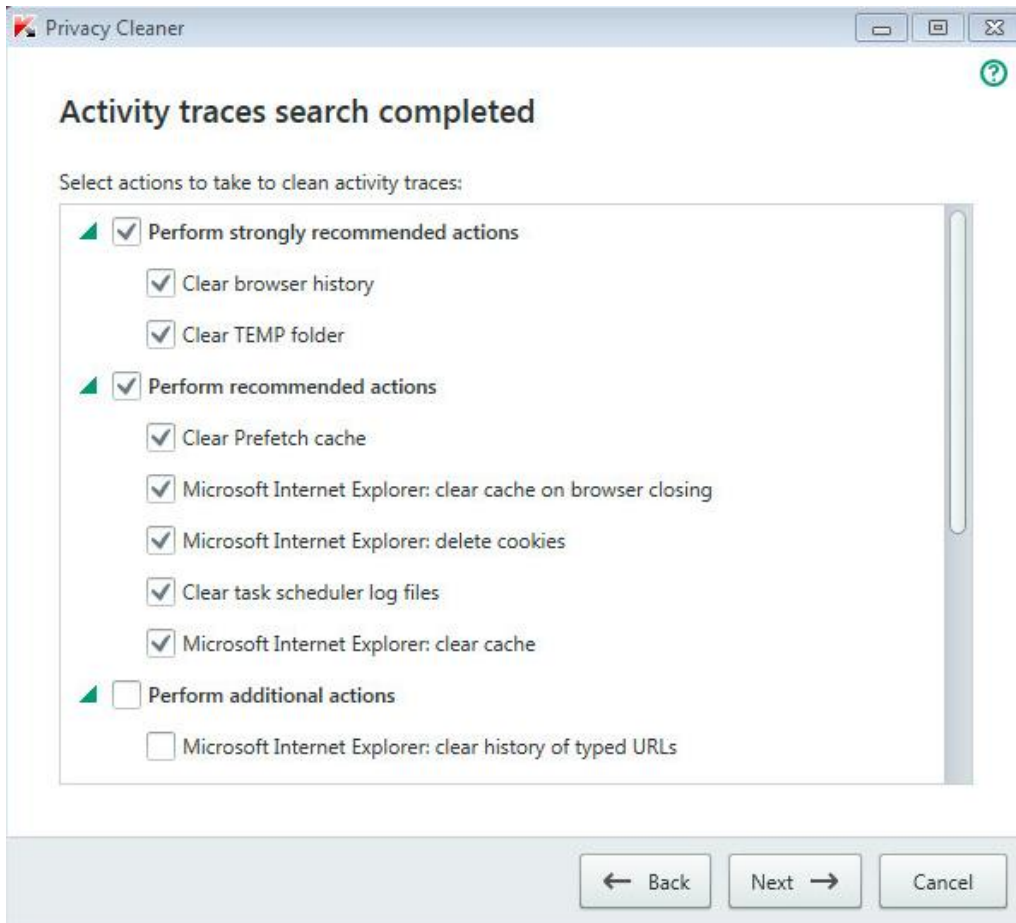

Figure 4. Activity traces detected and recommendations on eliminating them

To view the actions within a group, to the left of the group name, click the ► sign.

To make the Wizard perform a certain action, to the left of an action, select the corresponding check box. By default, the Wizard performs all recommended and strongly recommended actions. If you do not want to perform a certain action, clear the check box next to it.

It is strongly recommended that you not clear the check boxes selected by default, as doing so will leave your computer vulnerable to threats.

After you define the set of actions for the Wizard to perform, click the **Next** button.

### Step 4. Privacy Cleaner

The Wizard performs the actions selected during the previous step. Elimination of activity traces may take some time. To clean up certain activity traces, it may be necessary to restart the computer; if so, the Wizard notifies you.

When the clean-up is complete, the Wizard proceeds automatically to the next step.

### Step 5. Wizard completion

Click the **Finish** button to close the Wizard.

# CONTROLLING USERS' ACTIVITY ON THE COMPUTER AND ON THE INTERNET

This section provides information about how to control users' actions on the computer and on the Internet by using Kaspersky Internet Security.

## IN THIS SECTION

---

Using Parental Control .....	<a href="#">70</a>
Proceeding to the Parental Control settings .....	<a href="#">71</a>
Controlling computer use .....	<a href="#">71</a>
Controlling Internet use .....	<a href="#">72</a>
Controlling startup of games and applications.....	<a href="#">74</a>
Controlling messaging on social networks .....	<a href="#">75</a>
Monitoring message contents .....	<a href="#">75</a>
Viewing the report on a user's activity .....	<a href="#">76</a>

## USING PARENTAL CONTROL

*Parental Control* allows monitoring actions performed by users on the local computer and online. You can use Parental Control to restrict access to Internet resources and applications, as well as view reports on users' activities.

More and more children and teenagers are obtaining access to computers and web resources. The use of computers and the Internet presents a number of challenges and threats for children:

- Loss of time and / or money when visiting chat rooms, gaming resources, online stores, and auctions
- Access to websites targeted at an adult audience, such as those featuring pornography, extremism, firearms, drug abuse, and explicit violence
- Downloading of files infected with malware
- Health damage inflicted by excessive computer use
- Contacts with strangers who may pretend to be peers to obtain personal information from underage users, such as real name, physical address, or time of day when nobody is home

Parental Control allows you to reduce the risks posed by computer and Internet use. To do this, the following functions are available:

- Limiting the time for computer and Internet use.
- Creating lists of allowed and blocked games and applications, as well as temporarily restricting use of allowed applications.
- Creating lists of allowed and blocked websites and selectively blocking categories of websites with inappropriate content.

- Enabling safe search mode on search engines (links to websites with questionable content are not displayed in search results).
- Restricting file downloads from the Internet.
- Creating lists of contacts that are allowed or blocked for communication via social networks.
- Viewing the text of messaging via social networks.
- Blocking sending of certain personal data.
- Searching for specified keywords in message logs.

You can configure features of Parental Control for each user account on a computer individually. You can also view Parental Control reports on the activities of monitored users.

## PROCEEDING TO THE PARENTAL CONTROL SETTINGS

➔ *To go to the Parental Control settings:*

1. Open the main application window.
2. In the main application window, click the **Parental Control** button.
3. When you open the **Parental Control** window for the first time, the application prompts you to set a password to protect Parental Control settings. Select one of the following options:
  - If you want to password-protect access to Parental Control settings, fill in the **Password** and **Confirm** fields and click the **Continue** button.
  - If you do not want to password-protect access to Parental Control settings, click the **Skip** link to continue to the Parental Control settings.

The **Parental Control** window opens.

4. Select a user account and click the **Configure restrictions** link to open the Parental Control settings window.

## CONTROLLING COMPUTER USE

Parental Control allows you to limit the amount of time spent by the user at the computer. You can specify a time interval during which Parental Control should block access to the computer (bedtime), as well as a daily time limit on total computer use. You can specify different limit amounts for weekdays and for weekends.

➔ *To configure time limits on computer use:*

1. Go to the Parental Control settings window (see the section "Proceeding to the Parental Control settings" on page [71](#)).
2. In the Parental Control settings window, select the **Computer** section.
3. To specify a time interval during which Parental Control will block access to the computer, in the **Weekdays** and **Weekends** sections, select the **Block access from** check box.
4. In the drop-down list next to the **Block access from** check box, specify the block start time.

- In the **to** drop-down list, specify the block end time.

You can also set up a schedule of computer use by using a table. To view the table, click the

button.

Parental Control blocks the user's access to the computer during the specified time interval.

- To set a time limit on total computer use during the day, in the **Weekdays** and **Weekends** sections, select the **Allow access for no longer than** check box and, from the drop-down list next to the check box, select a time interval.

Parental Control blocks the user's access to the computer when the total computer use during a day exceeds the specified amount of time.

- To set up breaks in the user's sessions of computer use, in the **Time breaks** section, select the **Take a break** check box and then, from the drop-down lists next to the check box, select values for the frequency of breaks (for example, every hour) and their length (for example, 10 minutes).

- In the **Parental Control** window, flip on the toggle switch located next to the user account.

Parental Control blocks the user's access to the computer in accordance with the new settings.

## CONTROLLING INTERNET USE

By using Parental Control, you can limit time spent on the Internet and prohibit users from accessing certain categories of websites or specified websites. You can also prohibit the user from downloading files of certain types (such as archives or videos) from the Internet.

### ➤ *To set a time limit on Internet use:*

- Go to the Parental Control settings window (see the section "Proceeding to the Parental Control settings" on page [71](#)).
- In the Parental Control settings window, select the **Internet** section.
- If you want to limit the total time for Internet use on weekdays, in the **Internet access restriction** section, select the **Restrict access on weekdays to** check box and then, from the drop-down list next to the check box, select a value for the time limit.
- If you want to limit the total time for Internet use on weekends, select the **Restrict access on weekends to** check box and then, from the drop-down list next to the check box, select a value for the time limit.
- In the **Parental Control** window, flip on the toggle switch located next to the user account.

Parental Control will limit the total amount of time spent on the Internet by the user, in accordance with the values that you have specified.

### ➤ *To restrict visits to specific websites:*

- Go to the Parental Control settings window (see the section "Proceeding to the Parental Control settings" on page [71](#)).
- In the Parental Control settings window, select the **Internet** section.
- To keep adult content from being displayed in search results, in the **Control Web Browsing** section select the **Enable Safe Search** check box.

When you search for information on such websites as Google™, YouTube™ (only for users who have not signed in to the youtube.com website under their account), Bing®, Yahoo!™, Mail.ru, VKontakte, and Yandex, no adult content will be displayed in the search results.

4. To block access to websites of certain categories:
  - a. In the **Control Web Browsing** section, select the **Block access to the following websites** check box.
  - b. Select **Adult websites** and click the **Select categories of websites** link to open the **Block access to website categories** window.
  - c. Select the check boxes next to categories of websites that you want to block.

Parental Control will block all of the user's attempts to open a website if its contents are classified as belonging to any of the blocked categories.

5. To block access to specific websites:
  - a. In the **Control Web Browsing** section, select the **Block access to the following websites** check box.
  - b. Click the **Add exclusions** link to open the **Exclusions** window.
  - c. In the lower part of the window, click the **Add** button.

A window for adding a new web address mask opens.

  - d. Enter the address of a website to which you want to prohibit visits, by filling in the **URL mask** field.
  - e. In the **Scope** section, define the scope of what you want to block: the entire website or the specified web page only.
  - f. If you want to block the specified website, in the **Action** section, select **Block**.
  - g. Click the **Add** button.

The specified website appears in the list in the **Exclusions** window.

6. In the **Parental Control** window, flip on the toggle switch located next to the user account.

Parental Control will block all of the user's attempts to open any listed website, in accordance with the current settings.

➡ *To prohibit downloading certain types of files from the Internet:*

1. Go to the Parental Control settings window (see the section "Proceeding to the Parental Control settings" on page [71](#)).
2. In the Parental Control settings window, select the **Internet** section.
3. In the **Block file downloading** section, select the check boxes next to file types for which you want to block downloads.
4. In the **Parental Control** window, flip on the toggle switch located next to the user account.

Parental Control will block downloads of files of the specified types from the Internet.

## CONTROLLING STARTUP OF GAMES AND APPLICATIONS

By using Parental Control, you can allow or prohibit the user to start games depending on their age rating. You can also prohibit the user from starting specified applications (such as games or IM clients) or limit the time allowed for using applications.

### ► To block games with age-inappropriate content:

1. Go to the Parental Control settings window (see the section "Proceeding to the Parental Control settings" on page [71](#)).
2. In the Parental Control settings window, select the **Applications** section.
3. In the **Block games by content** section, block startup of games that are inappropriate for the selected user based on age and/or content:
  - a. If you want to block all games that contain content inappropriate for the user's age, select the **Restrict startup of games for ages younger than** check box and, from the drop-down list next to the check box, select an age restriction option.
  - b. If you want to block games with content of a certain category:
    - a. Select the **Block games from adult categories** check box.
    - b. Click the **Select categories of games** link to open the **Block games by categories** window.
    - c. Select the check boxes next to the content categories corresponding to games that you want to block.
4. In the **Parental Control** window, flip on the toggle switch located next to the user account.

### ► To restrict startup of a specific application:

1. Go to the Parental Control settings window (see the section "Proceeding to the Parental Control settings" on page [71](#)).
2. In the Parental Control settings window, select the **Applications** section.
3. In the lower part of the window, click the **Add application to list** link to open the **Open** dialog box and select the executable file of an application.  
  
The selected application appears in the list in the **Block specified applications** section. Kaspersky Internet Security automatically adds the application to a certain category, for example, *Games*.
4. If you want to block an application, select the check box next to the name of the application in the list. You can also block all applications that belong to a specified category by selecting the check box next to the name of that category on the list (for example, you can block the *Games* category).
5. If you want to restrict how long an application is used, select an application or a category of applications from the list and click the **Configure rules** link to open the **Application usage restriction** window.
6. If you want to set a time limit on use of an application on weekdays and weekends, in the **Weekdays** and **Weekends** sections, select the **Allow access for no longer than** check box and, in the drop-down list specify the number of hours that the user is allowed to use the application each day. You can also specify the time when the user is allowed / prohibited to use the application, by using a table. To view the table, click the  button.
7. If you want to set pauses in use of an application, in the **Time breaks** section, select the **Take a break** check box and, from the drop-down lists, select values for the break frequency and length.
8. Click the **Save** button.
9. In the **Parental Control** window, flip on the toggle switch located next to the user account.

Parental Control will apply the specified restrictions when the user accesses the application.

## CONTROLLING MESSAGING ON SOCIAL NETWORKS

By using Parental Control, you can view a user's messaging over social networks, as well as block messaging with specified contacts.

➤ *To configure monitoring of a user's messaging:*

1. Go to the Parental Control settings window (see the section "Proceeding to the Parental Control settings" on page [71](#)).
2. In the Parental Control settings window, select the **Communication** section.
3. To view messaging logs and, if necessary, block specified contacts:
  - a. Select **Block messaging with all contacts except allowed known contacts**.
  - b. Click the **Known contacts** link to open the **Messaging Report** window.
  - c. View contacts with whom the user has been messaging. You can display specified contacts in the window by using one of the following methods:
    - To view logs of the user's messaging over a specific social network, in the left part of the window select the required item from the drop-down list.
    - To view contacts with whom the user has been writing most actively, in the drop-down list in the right part of the window, select **By number of messages**.
    - To view contacts with whom the user has been communicating on a specified day, in the drop-down list in the right part of the window, select **By date of messaging**.
  - d. To view the user's messaging with a specified contact, click the contact in the list.  
A window with history of messaging with this contact opens.
  - e. If you want to block the user's messaging with the selected contact, click the **Block messaging** button.
4. In the **Parental Control** window, flip on the toggle switch located next to the user account.

Parental Control will block exchange of messages between the user and the selected contact.

## MONITORING MESSAGE CONTENTS

By using Parental Control, you can monitor and prohibit the user's attempts to insert specified private data (such as names, phone numbers, banking card numbers) and keywords (such as obscene words) into messages.

➤ *To configure control of private data transfer:*

1. Go to the Parental Control settings window (see the section "Proceeding to the Parental Control settings" on page [71](#)).
2. In the Parental Control settings window, select the **Content Control** section.
3. In the **Private data transfer control** section, select the **Block private data transfer to third parties** check box.
4. Click the **Edit list of private data** link to open the **Private data list** window.
5. In the lower part of the window, click the **Add** button.

A window opens for adding private data.

6. Select a type of private data (for example, "phone number") by clicking the corresponding link or enter a description in the **Field name** field.
7. Specify private data (such as your last name or phone number) in the **Value** field.
8. Click the **Add** button.

The private data is listed in the **Private data list** window.

9. In the **Parental Control** window, flip on the toggle switch located next to the user account.

Parental Control monitors and blocks the user's attempts to use the specified identity data in messaging via the Internet.

➤ *To configure Keyword Control for messages:*

1. Go to the Parental Control settings window (see the section "Proceeding to the Parental Control settings" on page [71](#)).
2. In the Parental Control settings window, select the **Content Control** section.
3. In the **Keyword Control** section, select the **Detect use of key words** check box.
4. Click the **Edit list of key words** link to open the **List of key words** window.
5. In the lower part of the window, click the **Add** button.

A window opens for adding a keyword.

6. Enter a key phrase in the **Value** field and click the **Add** button.

The specified key phrase appears in the list of key words in the **List of key words** window.

7. In the **Parental Control** window, flip on the toggle switch located next to the user account.

Parental Control will detect transmission of messages that contain the specified key phrase during messaging over the Internet and will log information about such messages in a report.

## VIEWING THE REPORT ON A USER'S ACTIVITY

You can access reports on the activity of each user account that is controlled by Parental Control, with separate reporting on each category of controlled events.

➤ *To view a report on the activity of a controlled user account:*

1. Go to the Parental Control settings window (see the section "Proceeding to the Parental Control settings" on page [71](#)).
2. Select a user account and click the **View report** link to go to the reports window.
3. In the section with the relevant type of restriction (for example, **Internet** or **Communication**), open the report on monitored actions by clicking the **Details** link.

The window displays a report on monitored actions of the user.

# REMOTE MANAGEMENT OF COMPUTER PROTECTION

This section describes how you can remotely manage protection of your computer with Kaspersky Internet Security installed.

## IN THIS SECTION

---

About remote management of computer protection .....	<a href="#">77</a>
Proceeding to remote management of computer protection.....	<a href="#">78</a>

## ABOUT REMOTE MANAGEMENT OF COMPUTER PROTECTION

If a computer has Kaspersky Internet Security installed, you can manage protection of this computer remotely. Computer protection can be managed remotely via My Kaspersky portal. To manage computer protection remotely, register on My Kaspersky portal, sign in to your My Kaspersky account, and go to **Devices** section.

My Kaspersky portal lets you accomplish the following computer security tasks:

- View the list of computer security problems and fix them remotely
- Scan the computer for viruses and other threats
- Update databases and application modules
- Configure Kaspersky Internet Security components

If a computer scan is started from My Kaspersky portal, Kaspersky Internet Security processes objects that are detected automatically without your involvement. On detecting a virus or other threat, Kaspersky Internet Security attempts to perform disinfection without rebooting the computer. If disinfection without restarting the computer is impossible, the list of computer security problems on My Kaspersky portal shows a message to the effect that the computer needs restarting to perform disinfection.

If the list of detected objects on My Kaspersky portal includes more than 10 items, they are grouped. In this case, the detected objects can be processed via the portal only together without the ability to examine each object separately. To view separately objects in this case, you are advised to use the interface of the application installed on the computer.

## PROCEEDING TO REMOTE MANAGEMENT OF COMPUTER PROTECTION

➔ *To proceed to remote management of computer protection:*

1. Open the main application window.
2. Click the **Additional Tools** button.

The **Tools** window opens.

3. In the **Tools** window, click the **Management Console** link to open the **Online Management** window.
4. In the **Online Management** window, click the **Connect the computer to My Kaspersky** button.

My Kaspersky portal logon form loads in the **Online Management** window, unless you have already logged on. Fill out the fields and log on to My Kaspersky portal.

A connection to My Kaspersky portal may fail due to a portal malfunction. When this happens, Kaspersky Internet Security displays a notification about problems experienced by My Kaspersky portal that are being resolved by Kaspersky Lab staff. If you are unable to connect to My Kaspersky portal due to a portal malfunction, retry connecting later.

My Kaspersky portal page with the **Devices** section opens in the browser window by default.

# RESERVING OPERATING SYSTEM RESOURCES FOR COMPUTER GAMES

When Kaspersky Internet Security runs in full-screen mode together with some other applications (particularly computer games), the following issues may occur:

- Application or game performance decreases due to lack of system resources.
- Notification windows of Kaspersky Internet Security distract the user from the gaming process.

To avoid changing the settings of Kaspersky Internet Security manually every time you switch to full-screen mode, you can use Gaming Profile. When Gaming Profile is enabled, switching to full-screen mode automatically changes the settings of all the components of Kaspersky Internet Security, ensuring optimal system functioning in that mode. After you exit from full-screen mode, application settings return to the initial values used before full-screen mode was activated.

➡ *To enable Gaming Profile:*

1. Open the main application window.
2. Click the  button in the lower part of the window.

The **Settings** window opens.

3. In the left part of the window, select the **Performance** section.

The window displays the performance settings of Kaspersky Internet Security.

4. In the **Gaming Profile** section, select the **Use Gaming Profile** check box.

# HANDLING UNKNOWN APPLICATIONS

Kaspersky Internet Security helps to minimize the risk associated with using unknown applications (such as the risk of infection with viruses and other malware and unwanted changes to operating system settings).

Kaspersky Internet Security includes components and tools that allow checking an application's reputation and controlling its activities on your computer.

## IN THIS SECTION

---

Checking application reputation .....	<a href="#">80</a>
Controlling application activity on the computer and on the network .....	<a href="#">81</a>
Configuring Application Control .....	<a href="#">83</a>
About applications' access to the webcam .....	<a href="#">83</a>
Configuring the settings of application access to the webcam .....	<a href="#">84</a>
Allowing application access to the webcam .....	<a href="#">85</a>
About access by applications to sound recording devices .....	<a href="#">85</a>
Configuring application access to sound recording devices .....	<a href="#">86</a>
About System Changes Control .....	<a href="#">87</a>
Enabling System Changes Control .....	<a href="#">87</a>

## CHECKING APPLICATION REPUTATION

Kaspersky Internet Security allows you to verify the reputation of applications with users all over the world. The reputation of an application comprises the following criteria:

- Name of the vendor
- Information about the digital signature (if the application is digitally signed)
- Information about the group to which the application has been assigned by Application Control or most users of Kaspersky Security Network
- Number of users of Kaspersky Security Network who use the application (available if the application has been included in the Trusted group in the Kaspersky Security Network database)
- Time at which the application become known to Kaspersky Security Network
- Countries in which the application is the most widespread

Checking of application reputation is available if you have agreed to participate in Kaspersky Security Network.

- To learn the reputation of an application:

Open the context menu of the application's executable file and select **Check reputation in KSN** (see the following figure).

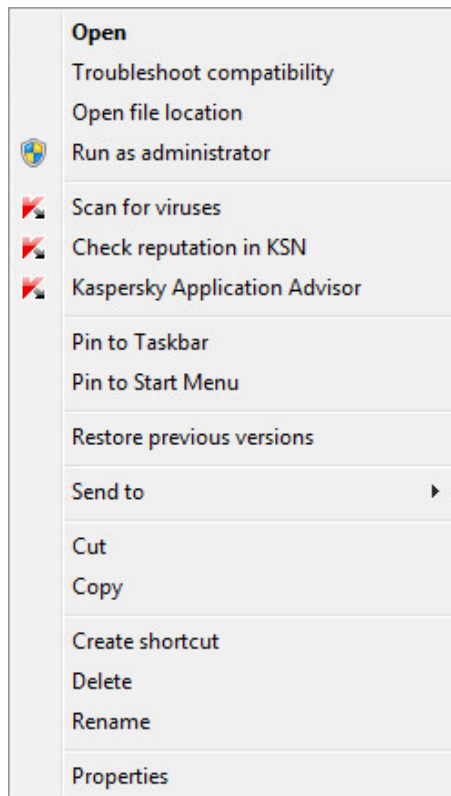

Figure 5. Object context menu

This opens a window with information about the reputation of the application in Kaspersky Security Network.

Participating in Kaspersky Security Network ..... [97](#)

## CONTROLLING APPLICATION ACTIVITY ON THE COMPUTER AND ON THE NETWORK

Application Control prevents applications from performing actions that may be dangerous for the operating system and controls access to operating system resources and your personal data.

Application Control tracks actions performed in the operating system by applications installed on the computer and regulates them based on rules. These rules restrict suspicious activity of applications, including access by applications to protected resources, such as files and folders, registry keys, and network addresses.

On 64-bit operating systems, applications' rights for the following actions cannot be configured:

- Direct access to physical memory
- Managing printer driver

- Service creation
- Service reading
- Service editing
- Service reconfiguration
- Service management
- Service start
- Service removal
- Access to internal browser data
- Access to critical objects of the operating system
- Access to password storage
- Setting debug privileges
- Use of program interfaces of the operating system
- Use of program interfaces of the operating system (DNS)

On 64-bit Microsoft Windows 8, applications' rights for the following actions cannot be configured:

- Sending windows messages to other processes
- Suspicious operations
- Hooks installation
- Hooking incoming messages of the stream
- Making of screenshots

Applications' network activity is controlled by the Firewall component.

When an application is started on the computer for the first time, Application Control checks the safety of the application and assigns it to a group (Trusted, Untrusted, High Restricted, or Low Restricted). The group defines the rules that Kaspersky Internet Security applies for controlling the activity of the application.

Kaspersky Internet Security assigns applications to trust groups (Trusted, Untrusted, High Restricted, or Low Restricted) only if Application Control or Firewall is enabled, and also when both these components are enabled. If both these components are disabled, the functionality that assigns applications to trust groups does not work.

You can edit application control rules manually.

## CONFIGURING APPLICATION CONTROL

➤ *To configure Application Control:*

1. Open the main application window of Kaspersky Internet Security.
2. In the lower part of the main window, click the **Additional Tools** button.  
The **Tools** window opens.
3. Select the **Application Control** section.  
The **Application Control** window opens.
4. In the **Application Control** window, in the **Applications** section, click the **Manage applications** link to open the **Manage applications** window.
5. In the list, select the relevant application and double-click it to open the **Application rules** window.
6. To configure the rules for access by an application to operating system resources:
  - a. On the **Files and system registry** tab, select the relevant resource category.
  - b. Right-click the column with an available action for the resource (**Read**, **Write**, **Delete**, or **Create**) to open the menu. In the context menu, select the relevant item (**Allow**, **Deny**, **Prompt for action**, or **Inherit**).
7. To configure the rights of an application to perform various actions in the operating system:
  - a. On the **Rights** tab, select the relevant category of rights.
  - b. In the **Action** column, click the icon to open the context menu and select the relevant item (**Allow**, **Deny**, **Prompt for action** or **Inherit**).
8. To configure the rights of an application to perform various actions on the network:
  - a. On the **Network rules** tab, click the **Add** button.  
The **Network rule** window opens.
  - b. In the window that opens, specify the required rule settings and click **Save**.
  - c. Assign a priority to the new rule. To do so, select the rule and move it up or down the list.
9. To exclude certain application actions from the restrictions of Application Control, on the **Exclusions** tab, select the check boxes for actions that you do not want to be controlled.
10. Click the **Save** button.

All exclusions created in the rules for applications are accessible in the Kaspersky Internet Security settings window, in the **Threats and Exclusions** section.

Application Control monitors and restricts the actions of the application in accordance with the specified settings.

## ABOUT APPLICATIONS' ACCESS TO THE WEBCAM

Criminals may attempt to obtain unauthorized access to your webcam by means of dedicated software. Kaspersky Internet Security blocks unauthorized access to the webcam and notifies you that access has been blocked. By default, Kaspersky Internet Security blocks access to the webcam for applications that have been included in the High Restricted or Untrusted groups.

You can allow access to the webcam for applications (see the section "Allowing application access to the webcam" on page 85) included in the High Restricted and Untrusted groups, in the Application Control settings window. If an application from the Low Restricted trust group attempts to connect to the webcam, Kaspersky Internet Security displays a notification and prompts you to decide whether to provide that application with access to the webcam.

If a webcam access attempt is made by an application that is denied access by default, Kaspersky Internet Security shows a notification. The notification shows information to the effect that an application installed on the computer (such as Skype™) is currently receiving video data from the webcam. In the notification drop-down list, you can block the application from accessing the webcam or proceed to configure the settings of application access to the webcam (see the section "Configuring the settings of application access to the webcam" on page 84). This notification is not displayed if applications are already running in full-screen mode on your computer.

In the drop-down list of the notification about video data received by the application, you can also choose to **Hide this notification** or proceed to configure notification display settings (see the section "Configuring the settings of application access to the webcam" on page 84).

By default, Kaspersky Internet Security allows webcam access to applications that require your permission if the application's GUI is still being loaded, unloaded, or not responding, and you cannot allow access manually.

Webcam access protection functionality has the following features and limitations:

- The application controls video and still images derived from processing of webcam data.
- The application controls the audio signal if it is part of the video stream coming from the webcam.
- Kaspersky Internet Security controls only webcams connected via USB or IEEE1394 that are displayed in Windows Device Manager as Imaging Devices.

To view the list of supported webcams, click this link (<http://support.kaspersky.com/12001>).

To activate protection against unauthorized access to the webcam, the Application Control component must be enabled.

## CONFIGURING THE SETTINGS OF APPLICATION ACCESS TO THE WEBCAM

➤ *To configure the settings of application access to the webcam:*

1. Open the main application window.
2. Click the  button in the lower part of the window.

The **Settings** window opens.

3. In the **Protection** section, in the right part of the window select **Webcam Access**.
4. Configure the settings of access to the webcam of your computer:
  - To block all applications from accessing the webcam, select the **Block access to webcam for all applications** check box.
  - To receive notifications when the webcam is used by an application that is allowed to do so, select the **Show notification when the webcam is in use by an application for which webcam access is allowed** check box.
  - To allow webcam access for all applications, in the **Settings** window on the **Protection** tab disable **Webcam access**.

## ALLOWING APPLICATION ACCESS TO THE WEBCAM

➤ To allow an application to access the webcam:

1. Open the main application window.
2. Click the **Additional Tools** button.

The **Tools** window opens.

3. In the **Tools** window, click the **Details** button in the **Application Control** section.

The **Application Control** window opens.

4. In the **Application Control** window, in the **Applications** section, click the **Manage applications** link to open the **Manage applications** window.
5. In the list, select the application for which you want to allow webcam access. Double-click the application to open the **Application rules** window.
6. In the **Application rules** window, go to the **Rights** tab.
7. In the list of rights categories, select **Operating system modification** → **Suspicious modifications in the operating system** → **Access webcam**.
8. In the **Action** column, click the icon to open the context menu and select **Allow**.
9. Click the **Save** button.

The selected application will be allowed access to the webcam.

## ABOUT ACCESS BY APPLICATIONS TO SOUND RECORDING DEVICES

Criminals may attempt to obtain unauthorized access to your sound recording devices by means of special software. *Sound recording devices* are microphones that are connected to or built into the computer and capable of transmitting an audio stream through the sound card interface (input signal). Kaspersky Internet Security controls access by applications to sound recording devices and provides protection against unauthorized interception of the audio stream.

By default, Kaspersky Internet Security blocks applications from Untrusted and High Restricted trust groups from receiving the audio stream coming from sound recording devices connected to the computer. You can manually allow applications to access sound recording devices (see the section "Configuring application access to sound recording devices" on page [86](#)).

If an application from the Low Restricted group is requesting access to a sound recording device, Kaspersky Internet Security displays a notification and prompts you to choose whether or not to allow this application to access the sound recording device. If Kaspersky Internet Security is unable to display this notification (for example when the Kaspersky Internet Security graphic interface has not loaded yet), the application from the Low Restricted trust group is allowed access to the sound recording device.

All applications in the Trusted group are allowed access to sound recording devices by default.

The functionality that controls access by applications to sound recording devices has the following specifics:

- The Application Control component has to be enabled for this functionality to work.
- If the application started receiving the audio stream before the Application Control component was started, Kaspersky Internet Security allows the application to receive the audio stream and does not show any notifications.
- After the settings of application access to sound recording devices have been changed (for example, the application has been prohibited from receiving the audio stream in the Application Control settings window), this application has to be restarted to stop it from receiving the audio stream.
- Control of access to sound recording devices is independent of the settings of application access to the webcam.
- If the application GUI has not loaded yet, applications for which the "Prompt for action" permission has been set are allowed to receive the audio stream.
- Kaspersky Internet Security protects access to built-in microphones and external microphones only. Other audio streaming devices are not supported.

The application does not guarantee protection of the audio stream from such devices as DSLR cameras, camcorders, and action cameras.

## CONFIGURING APPLICATION ACCESS TO SOUND RECORDING DEVICES

➤ *To configure the settings of application access to sound recording devices:*

1. Open the main application window.
2. In the lower part of the main window, click the **Additional Tools** button.  
The **Tools** window opens.
3. Select the **Application Control** section.  
The **Application Control** window opens.
4. Click the **Manage applications** link to open the **Manage applications** window.
5. In the list, select the application for which you want to allow access to sound recording devices. Double-click the application to open the **Application rules** window.
6. In the **Application rules** window, go to the **Rights** tab.
7. In the list of rights categories, select **Operating system modification** → **Suspicious modifications in the operating system** → **Access sound recording devices**.
8. In the **Action** column, click the icon and select one of the menu items:
  - To allow the application to receive the audio stream, select **Allow**.
  - To deny the application access to the audio stream, select **Block**.
  - To receive notifications about instances of applications being allowed or denied access to the audio stream, select **Log events**.
9. Click the **Save** button.

## ABOUT SYSTEM CHANGES CONTROL

Kaspersky Internet Security uses System Changes Control to control the following operating system changes:

- Change of the home page address in the browser
- Change of the search engine in the browser
- Installation of plug-ins, extensions, and toolbars in the browser
- Change of the default browser
- Changes of proxy server settings

The specified list of monitored changes is minimal and guaranteed by Kaspersky Lab. The scope of monitored changes may be expanded following an update of databases and application software modules.

If any application attempts to change the default browser for one of the protocols (http, ftp, https) and you allow this change to be made in the notification window, Kaspersky Internet Security subsequently automatically allows this application to change the default browser for the two other protocols without showing any notifications.

Kaspersky Internet Security does not monitor operating system changes and does not show the notification when the operating system changes are made by the following applications:

- Browser
- Standard tool for editing browser settings
- A standard operating system tool for changing the controlled settings, such as explorer.exe
- An application incompatible with Kaspersky Internet Security if controlling or reverting changes made by this application can cause it to malfunction
- Installation wizard of the new version of Kaspersky Internet Security
- An application performing the same functions as System Changes Control (for example, Yandex Browser Manager)
- Applications in the style of the new Windows user interface

## ENABLING SYSTEM CHANGES CONTROL

➔ *To enable System Changes Control:*

1. Open the main application window.
2. Click the  button in the lower part of the window.  
The **Settings** window opens.
3. In the left part of the **Settings** window, select the **Protection** section.
4. Click the **System Changes Control** link to open the **Changes to the operating system** window.
5. Flip on the **System Changes Control** toggle switch to apply changes and enable the System Changes Control protection component.
6. Select the **Block changes automatically** check box if you want Kaspersky Internet Security to block changes to all controlled operating system settings automatically without showing a notification.

# TRUSTED APPLICATIONS MODE

This section provides information about Trusted Applications mode.

## IN THIS SECTION

---

About Trusted Applications mode .....	<a href="#">88</a>
Enabling Trusted Applications mode .....	<a href="#">89</a>
Disabling Trusted Applications mode .....	<a href="#">90</a>

## ABOUT TRUSTED APPLICATIONS MODE

In Kaspersky Internet Security, you can create on your computer a secure environment, called Trusted Applications mode, in which only trusted applications are allowed to start. Trusted Applications mode is useful if you use a stable set of well-known applications and you do not need to frequently run new unknown applications downloaded from the Internet. When running in Trusted Applications mode, Kaspersky Internet Security blocks all applications that have not been classified as trusted by Kaspersky Lab. The decision on whether to trust an application can be made based on information received from Kaspersky Security Network, details of the application's digital signature, and the trust level of the installer and the source of the application download.

Trusted Applications mode has the following features and limitations:

- To use Trusted Applications mode, make sure that all of the following protection components are enabled: Application Control, File Anti-Virus, and System Watcher. If any of these components stops running, Trusted Applications mode is disabled.
- Trusted Applications mode may be unavailable if system files are located on partitions of a hard drive with a non-NTFS file system.
- Trusted Applications mode may be missing or unavailable in the current version of Kaspersky Internet Security. The availability of Trusted Applications mode in Kaspersky Internet Security depends on your region and service provider. If you need Trusted Applications mode, you are recommended to ask for it when purchasing the application.
- If Trusted Applications mode is supported in your version of Kaspersky Internet Security but is not currently available, it may become available after you update the databases and application software modules (see the section "Updating databases and application software modules" on page [41](#)). After the databases and application software modules are updated, you can configure the run mode for unknown applications and modules.

Trusted Applications mode can be enabled automatically or manually. When Trusted Applications mode is enabled manually, all applications installed on the computer are assigned Trusted status. Applications installed after Trusted Application mode was enabled are not assigned Trusted status and are processed according to general rules of Application Control.

You can also enable Trusted Applications mode manually after Kaspersky Internet Security analyzes the operating system and installed applications. If Kaspersky Internet Security analysis reveals that unknown applications are installed on the computer, enabling Trusted Applications mode is not recommended.

Trusted Applications mode is enabled automatically if Kaspersky Internet Security analysis of the operating system and installed applications reveals that mostly trusted applications are used on the computer.

When Trusted Applications mode is enabled, Kaspersky Internet Security may block applications that have not been recognized as trusted. You can allow such applications to be run (see the section "Controlling application activity on the computer and on the network" on page [81](#)) if you use any, and then enable Trusted Applications mode.

## ENABLING TRUSTED APPLICATIONS MODE

➔ *To enable Trusted Applications mode:*

1. Open the main application window.
2. In the lower part of the main window, click the **Additional Tools** button.

The **Tools** window opens.

3. In the **Tools** window, in the list of tools in the left part of the window click the **Trusted Applications mode** link to open the **Trusted Applications mode** window.

4. Select one of the options to enable Trusted Applications mode:

- In the **Trusted Applications mode** window, click the **Enable** button.

Trusted Applications mode is enabled. When this option is selected, Kaspersky Internet Security allows running applications that had been installed on your computer before Trusted Applications mode became active.

- Click the **Turn on and scan all installed applications** link to start analysis of the operating system, after which Trusted Applications mode is enabled.

This runs analysis of the operating system and installed applications, except for temporary files and resource dynamic link libraries that contain executable code. The progress of the analysis is displayed in the **Analysis of installed applications** window that opens.

- a. Wait until the analysis of the operating system and installed applications completes. You can minimize the **Analysis of installed applications** window.
- b. View information about the results of the analysis in the **Analysis of installed applications and executable files is complete** window.

If system files with unrecognized properties are detected during analysis, you are advised to avoid enabling Trusted Applications mode. You are also advised to avoid enabling Trusted Applications mode if many applications are detected for which Kaspersky Internet Security does not have enough information to classify them as completely safe.

You can view information about untrusted system files by clicking the **Go to the list of unknown system files** link. The list of untrusted system files is displayed in the **Unknown system files** window. You can also cancel use of Trusted Applications mode, by clicking the **Disable** button.

- c. If you want to allow running untrusted applications and system files, in the **Analysis of installed applications and executable files is complete** window, click the **Continue** link.
- d. Click the **Enable Trusted Applications mode by default** button.

Trusted Applications mode is now enabled. Kaspersky Internet Security will block all applications and system files that have not been classified as trusted. After you enable Trusted Applications mode and restart the operating system for the first time, unknown applications are allowed to start until Kaspersky Internet Security starts. After later restarts of the operating system, Kaspersky Internet Security blocks unknown applications from starting.

## DISABLING TRUSTED APPLICATIONS MODE

➤ *To disable Trusted Applications mode:*

1. Open the main application window.
2. In the lower part of the main window, click the **Additional Tools** button.

The **Tools** window opens.

3. In the **Tools** window, in the left part of the window click the **Trusted Applications mode** link to open the **Trusted Applications mode** window.
4. In the lower part of the window, in the **Trusted Applications mode is enabled** section, click the **Disable** link.

Trusted Applications mode is now disabled.

# PASSWORD-PROTECTING ACCESS TO KASPERSKY INTERNET SECURITY MANAGEMENT OPTIONS

A single computer may be shared by several users with various levels of experience and computer literacy. Unrestricted access of different users to Kaspersky Internet Security and its settings may compromise the level of computer security.

To restrict access to the application, you can set an administrator password and specify the actions for which this password must be entered:

- Configuring the application settings.
- Quitting the application.
- Removing the application.

➔ *To password-protect access to control over Kaspersky Internet Security:*

1. Open the main application window.
2. Click the  button in the lower part of the window.

The **Settings** window opens.

3. In the left part of the window, select the **General** section and click the **Set up password protection** link to open the **Password protection** window.
4. In the window that opens, fill in the **New password** and **Confirm password** fields.
5. In the **Password scope** group of settings, specify the application actions to which you want to restrict access.

A forgotten password cannot be recovered. If you have forgotten your password, contact Technical Support to recover access to Kaspersky Internet Security settings.

# PAUSING AND RESUMING COMPUTER PROTECTION

Pausing protection means temporarily disabling all protection components for some time.

When protection is paused or Kaspersky Internet Security is not running, the activity of the applications running on your computer is monitored. Information about the results of monitoring of application activity is saved in the operating system. When Kaspersky Internet Security is started again or protection is resumed, Kaspersky Internet Security uses this information to protect your computer from malicious actions that may have been performed when protection was paused or when Kaspersky Total Security was not running. Information about the results of monitoring of application activity is stored indefinitely. This information is deleted if Kaspersky Internet Security is removed from your computer.

➤ *To pause the protection of your computer:*

1. In the context menu of the application icon located in the taskbar notification area, select the **Pause protection** item.

The **Pause protection** window opens (see the following figure).

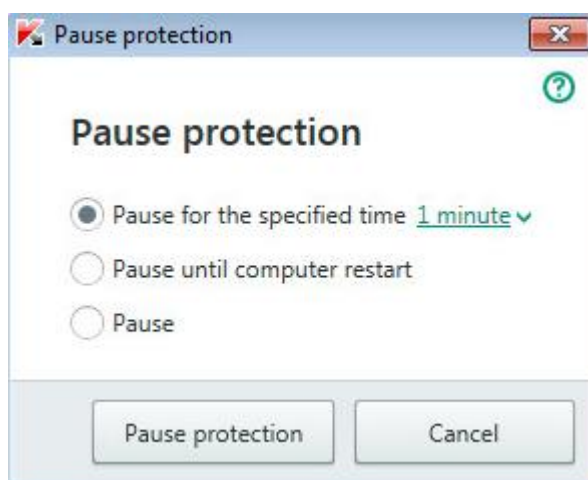

Figure 6. Pause protection window

2. In the **Pause protection** window, select the time interval after which protection will be resumed:
  - **Pause for the specified time** – protection is enabled after expiration of the time interval selected from the drop-down list.
  - **Pause until computer restart** – protection is enabled after the application is started again or the operating system is restarted (if the application automatically starts on startup).
  - **Pause** – protection will be resumed when you decide to resume it.
3. Click the **Pause protection** button and confirm your choice in the window that opens.

➤ *To resume computer protection:*

In the taskbar notification area, in the context menu of the application icon, select **Resume protection**.

# RESTORING THE DEFAULT APPLICATION SETTINGS

You can restore the settings recommended by Kaspersky Lab for Kaspersky Internet Security at any time. The settings can be restored using the *Application Configuration Wizard*.

When the Wizard completes its operation, the **Recommended** security level is set for all protection components. When restoring the **Recommended** security level, you can choose which settings previously configured for application components you want to keep.

➡ *To run the Application Configuration Wizard:*

1. Open the main application window.
2. Click the  button in the lower part of the window.

The **Settings** window opens.

3. Select the **General** section.

The window displays the settings of Kaspersky Internet Security.

4. In the lower part of the window, in the **Manage Settings** drop-down list, select **Restore settings**.

Let us review the steps of the Wizard in more detail.

## Step 1. Starting the Wizard

Click the **Next** button to proceed with the Wizard.

## Step 2. Restore settings

This Wizard window shows which Kaspersky Internet Security protection components have settings that differ from the default value because they were either changed by the user or accumulated by Kaspersky Internet Security through training (Firewall or Anti-Spam). If special settings have been created for any of the components, they are also shown in the window (see the following figure).

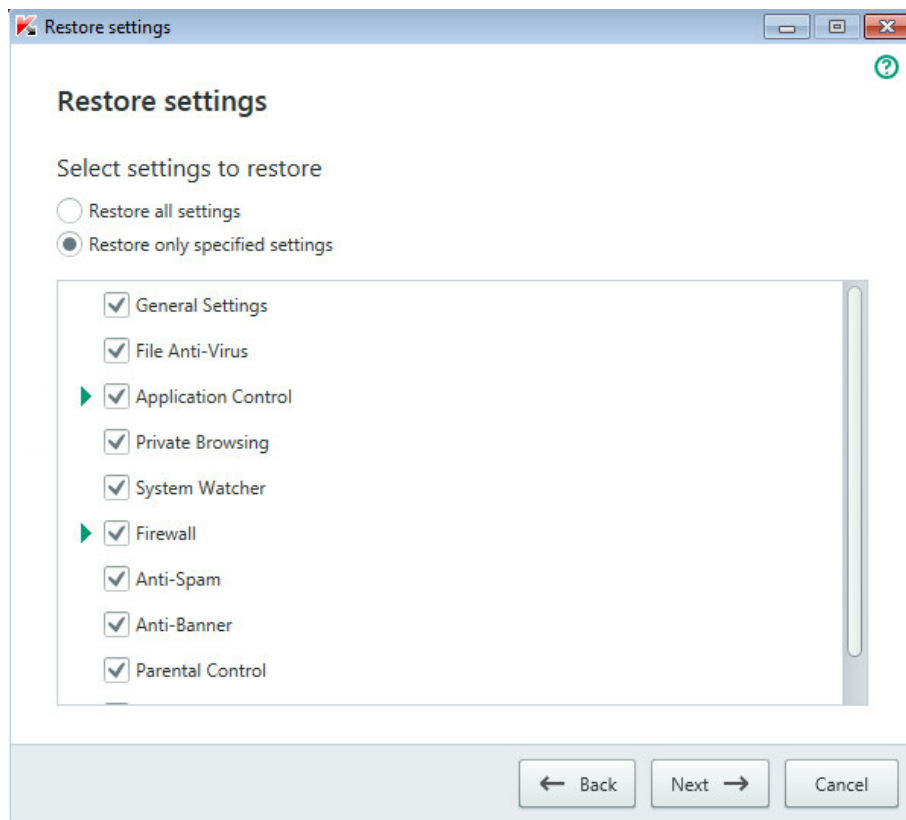

Figure 7. Restore settings window

Special settings include lists of allowed and blocked phrases and addresses used by Anti-Spam, lists of trusted web addresses and ISP phone numbers, protection exclusions created for application components, and filtering rules applied by Firewall to packets and applications.

The special settings are created when working with Kaspersky Internet Security with regard to individual tasks and security requirements. Kaspersky Lab recommends that you save your special settings when restoring the default application settings.

Select the check boxes for the settings that you want to save and click the **Next** button.

## Step 3. Operating system analysis

At this step, information about Microsoft Windows applications is collected. These applications are added to the list of trusted applications. No restrictions are placed on the actions that trusted applications perform in the operating system.

Once the analysis is complete, the Wizard will automatically proceed to the next step.

## Step 4. Finishing restoration

To close the Wizard after it completes its task, click the **Finish** button.

# VIEWING THE APPLICATION OPERATION REPORT

Kaspersky Internet Security maintains operation reports for each of the protection components. Using a report, you can obtain statistical information about the application's operation (for example, how many malicious objects have been detected and neutralized during a specified time period, how many times the application has been updated during the same period, how many spam messages have been detected, and much more). Reports are kept in encrypted format.

➤ *To view the application operation report:*

1. Open the main application window.
2. Click the **Additional Tools** button in the lower part of the main window to open the **Tools** window.
3. In the **Tools** window, select the **Report** section to open the **Reports** window.

The **Reports** window displays reports on application operation for the current day (in the left part of the window) and for a particular time period (in the right part of the window).

4. If you want to view a detailed report on application operation, in the upper part of the **Reports** window, click the **Detailed reports** link. The **Detailed Reports** window opens.

The **Detailed Reports** window displays data in the form of a table. For convenient viewing of reports, you can select various filtering options.

# APPLYING THE APPLICATION SETTINGS ON ANOTHER COMPUTER

After you have configured the application, you can apply its settings to a copy of Kaspersky Internet Security that is installed on another computer. As a result, the application will be configured identically on both computers.

The application settings are saved in a configuration file that you can move from one computer to another.

The settings of Kaspersky Internet Security are moved from one computer to another in three steps:

1. Save the application settings to configuration file.
2. Move the configuration file to the other computer (for example, by email or on a removable drive).
3. Import the settings from the configuration file to the application copy that is installed on the other computer.

➤ *To export the application settings:*

1. Open the main application window.
2. Click the  button in the lower part of the window.

The **Settings** window opens.

3. In the **Settings** window, select the **General** section.
4. In the **Manage Settings** drop-down list, select **Export settings**.

The **Save as** window opens.

5. Specify a name for the configuration file and click the **Save** button.

The application settings are now saved in the configuration file.

You can also export the application settings at the command prompt, by using the following command: `avp.com EXPORT <file_name>`.

➤ *To import settings into a copy of the application installed on another computer:*

1. On the other computer, open the main application window of Kaspersky Internet Security.
2. Click the  button in the lower part of the window.

The **Settings** window opens.

3. In the **Settings** window, select the **General** section.
4. In the **Manage Settings** drop-down list, select **Import settings**.

The **Open** window opens.

5. Specify a configuration file and click the **Open** button.

The settings are imported to the application that is installed on the other computer.

# PARTICIPATING IN KASPERSKY SECURITY NETWORK (KSN)

Kaspersky Internet Security uses cloud protection to make protection of your computer more effective. Cloud protection is implemented using the Kaspersky Security Network infrastructure that uses data received from users all over the world.

Kaspersky Security Network (KSN) is an infrastructure of online services that provides access to the Kaspersky Lab database with constantly updated information about the reputation of files, web resources, and software. The use of data from Kaspersky Security Network ensures faster responses by Kaspersky Internet Security to new threats, improves the performance of some protection components, and reduces the likelihood of false positives.

Users' participation in Kaspersky Security Network allows Kaspersky Lab to promptly receive information about types and sources of new threats, develop solutions for neutralizing them, and minimize the number of false positives. Participation in Kaspersky Security Network lets you access reputation statistics for applications and websites.

If you participate in Kaspersky Security Network, you automatically send information about the configuration of your operating system and the start and completion time of processes in Kaspersky Internet Security to Kaspersky Lab (see the section "About data provision" on page [35](#)).

## IN THIS SECTION

Enabling and disabling participation in Kaspersky Security Network ..... [97](#)

Checking the connection to Kaspersky Security Network ..... [98](#)

## ENABLING AND DISABLING PARTICIPATION IN KASPERSKY SECURITY NETWORK

Participation in Kaspersky Security Network is voluntary. You can enable or disable the use of Kaspersky Security Network (KSN) when installing Kaspersky Internet Security and / or at any moment after the application is installed.

➔ *To enable or disable participation in Kaspersky Security Network:*

1. Open the main application window.
2. Click the  button in the lower part of the window.

The **Settings** window opens.

3. In the **Additional** section, select **Connection to Kaspersky Lab web services**.

The window displays details of Kaspersky Security Network and Kaspersky Security Network participation settings.

4. Enable or disable participation in Kaspersky Security Network by clicking the **Enable** / **Disable** buttons:

- If you want to participate in Kaspersky Security Network, click the **Enable** button.

A window with the text of the Kaspersky Security Network Statement opens. If you accept the terms of the Statement, click the **I agree** button.

- If you do not want to participate in Kaspersky Security Network, click the **Disable** button.

## CHECKING THE CONNECTION TO KASPERSKY SECURITY NETWORK

Your connection to Kaspersky Security Network may be lost for the following reasons:

- You do not participate in Kaspersky Security Network.
- Your computer is not connected to the Internet.
- Current key status does not allow connecting to Kaspersky Security Network.

The current status of the key is displayed in the **Licensing** window.

➔ *To test the connection to Kaspersky Security Network:*

1. Open the main application window.
2. Click the **Additional Tools** button in the lower part of the main window to open the **Tools** window.
3. In the left part of the **Tools** window, click the **Cloud Protection** link to open the **Cloud Protection** window.

The **Cloud Protection** window displays the status of your connection to Kaspersky Security Network.

# PARTICIPATING IN THE PROTECT A FRIEND PROGRAM

With the Protect a Friend program, you can publish a download link on Twitter and on your page in social networks. This link allows your friends to download an installation package for Kaspersky Internet Security with an extended evaluation period. When one of your friends on Twitter or on a social network downloads the Kaspersky Internet Security installation package by clicking the link that you have published and then activates the application, you receive bonus points. You can exchange your bonus points for a bonus activation code for Kaspersky Internet Security.

Note that the option to participate in the Protect a Friend program may not be available to all users.

The number of bonus points depends on the application version.

To participate in the Protect a Friend program, open the web page with your Protect a Friend profile. Clicking the **My Kaspersky** link in the lower part of the main window of Kaspersky Internet Security opens the web page with your profile. Your profile is automatically created when you first log in.

To log in to your profile in the Protect a Friend program, you must use the user name and password of your My Kaspersky account. If you do not have a My Kaspersky account yet, you can create one when you open your Protect a Friend profile for the first time.

On the web page with your Protect a Friend profile, you can perform the following actions:

- View the number of collected bonus points.
- Publish links for downloading the Kaspersky Internet Security installation package.
- Edit your profile (the user picture and name that are shown on Twitter, social networks, and your blog, together with a link for downloading the Kaspersky Internet Security installation package).

After you switch from Kaspersky Internet Security to Kaspersky Total Security, you can continue participation in the Protect a Friend program. In this case, you share with friends a link for downloading the installation package of Kaspersky Internet Security. After you switch to Kaspersky Total Security, your history of participation in the Protect a Friend program and collected bonus points are saved, and you can exchange points for a bonus activation code for Kaspersky Internet Security. During the next installation of Kaspersky Total Security or upgrade to a newer version of Kaspersky Total Security, participation in the Protect a Friend program is terminated.

## IN THIS SECTION

Logging in to your profile in the Protect a Friend program.....	<a href="#">100</a>
Sharing a link to Kaspersky Internet Security with friends.....	<a href="#">101</a>
Exchanging points for a bonus activation code .....	<a href="#">102</a>

## LOGGING IN TO YOUR PROTECT A FRIEND PROFILE

To log in to your profile in the Protect a Friend program, you must use the user name and password of your My Kaspersky account. If you do not have a My Kaspersky account yet, create one when you visit the web page of the Protect a Friend program for the first time.

Your My Kaspersky account is your email address and the password (at least eight characters) that you specified when signing up.

After your account is created, a message will be sent to your email address, containing a link for activation of your My Kaspersky account.

After activation, you can use your My Kaspersky account to log in to the web page with your Protect a Friend profile.

### ➤ *To create your My Kaspersky account:*

1. Open the main application window and, in the lower part of the window, click the **My Kaspersky** link.

The Protect a Friend web page opens, containing fields for signing up or logging in to your My Kaspersky account.

2. Create and activate your My Kaspersky account:

- a. On the left part of the web page, enter an email address in the **Email** field.
- b. Enter a password and then re-enter it for confirmation in the **Password** and **Confirm password** fields. The password must contain at least eight characters.
- c. Click the **Register** button.

The web page displays a message informing you of successful registration of your My Kaspersky account. A message will be sent to your email address, containing a link that you must click to activate your My Kaspersky account.

- d. Click the link to activate your My Kaspersky account.

The web page displays a message informing you of successful activation of your My Kaspersky account. You can use your newly created My Kaspersky account to log in to your Protect a Friend profile.

If you already have a My Kaspersky account, you can use it to log in to the web page that contains your profile.

### ➤ *To log in to the web page with your Protect a Friend profile:*

1. Open the main application window and, in the lower part of the window, click the **My Kaspersky** link.

The Protect a Friend web page opens, containing fields for signing up or logging in to your My Kaspersky account.

2. On the right part of the web page, fill in the fields by entering the email address and the password that you specified during registration of your My Kaspersky account.
3. Click the **Log in** button.

The web page displays your Protect a Friend profile.

## SHARING A LINK TO KASPERSKY INTERNET SECURITY WITH FRIENDS

When logged in to the web page with your profile for the Protect a Friend program, you can publish a link for downloading the Kaspersky Internet Security installation package on Twitter as well as on social networks. You can also share details from your Protect a Friend profile with a link to the installation package, by pasting them on your website or blog. In addition, you can send a link for downloading the Kaspersky Internet Security installation package by email or via IM clients (such as ICQ).

➤ *To publish a link for downloading the Kaspersky Internet Security installation package on Twitter or on social networks:*

1. Open the main window of Kaspersky Internet Security and, in the lower part of the window, click the **My Kaspersky** link.

The web page for signing in to the Protect a Friend program opens.

2. Sign in on the web page with your My Kaspersky account.

The web page displays details of your Protect a Friend profile.

3. On the left part of the web page, click the button with the logo of the required social network (Facebook or vk.com) or Twitter.

The website of the selected social network or Twitter opens. A link for downloading the installation package of Kaspersky Internet Security with an extended evaluation period will appear in the news feeds of your friends. You can enter additional text in the publishing form, if necessary.

If you have not yet logged in to your social network or Twitter page, the sign-in page opens.

➤ *To publish a web widget with a link for downloading the installation package of Kaspersky Internet Security:*

1. Open the main window of Kaspersky Internet Security and, in the lower part of the window, click the **My Kaspersky** link.

The web page for signing in to the Protect a Friend program opens.

2. Sign in on the web page with your My Kaspersky account.

The web page displays details of your Protect a Friend profile.

3. In the upper part of the web page, in the **Share** drop-down list, select **Get web widget code**.

The **Web widget code** window opens, containing a web widget code to paste to your website.

You can copy the web widget code to the clipboard and then paste it in the HTML code of your website or blog.

➤ *To get a link for downloading the installation package of Kaspersky Internet Security to send by email or via IM clients:*

1. Open the main window of Kaspersky Internet Security and, in the lower part of the window, click the **My Kaspersky** link.

The web page for signing in to the Protect a Friend program opens.

2. Sign in on the web page with your My Kaspersky account.

The web page displays details of your Protect a Friend profile.

3. On the left part of the web page, click the **Get a link** link.

The **Link to installer package** window opens, displaying a link for downloading the Kaspersky Internet Security installation package.

You can copy the link to the clipboard and then send it by email or via IM clients.

## EXCHANGING POINTS FOR A BONUS ACTIVATION CODE

When you participate in the Protect a Friend program, you can receive a bonus activation code for Kaspersky Internet Security in exchange for a specified number of bonus points. Bonus points are awarded to you when users download Kaspersky Internet Security from the link that you have shared in your profile and activate the application.

Bonus activation codes are provided in the following cases:

- When a user with whom you have shared the link performs one-time activation of the trial version of Kaspersky Internet Security.
- When a user with whom you have shared the link activates Kaspersky Internet Security.

On the web page with your profile, you can view your bonus points history and information about bonus activation codes provided to you. Each bonus activation code provided to you will also be sent to your email address.

A bonus activation code can also be specified in the application as the new activation code.

A bonus activation code can be used to activate the application on another computer (for example, you can give it as a present to another user).

A bonus activation code cannot be used in the following cases:

- The application is in use by subscription. In this case, you can use the bonus activation code when the subscription expires. You can also apply your bonus activation code on another computer.
- An activation code is already set in the application as the new code. In this case, you can use the bonus activation code when the license expires.

➡ *To receive a bonus activation code and activate the application with it:*

1. Open the main window of Kaspersky Internet Security and, in the lower part of the window, click the **My Kaspersky** link.

The web page with your Protect a Friend profile opens.

2. Sign in on the web page with your My Kaspersky account.

The web page displays details of your Protect a Friend profile.

You can view information about bonus points awarded to you in the **My bonus points** section. If you have collected enough bonus points to receive a bonus activation code, next to the **Receive a bonus activation code** button on the right side of the web page, a  notification appears.

3. To receive a bonus activation code and activate the application with it:

- a. Click the **Receive a bonus activation code** button.

Wait until an activation code is received. The received bonus activation code is displayed in the window that opens.

- b. Click the **Activate** button.

The **Activation** window opens, showing a message about verification of the activation code. After the activation code is verified, a window opens, showing a message about successful activation of Kaspersky Internet Security.

➡ *To view the history of provided bonus activation codes and activate the application with a previously provided bonus activation code:*

1. Open the main window of Kaspersky Internet Security and, in the lower part of the window, click the **My Kaspersky** link.

The web page with your Protect a Friend profile opens.

2. Sign in on the web page with your My Kaspersky account.

The web page displays details of your Protect a Friend profile.

3. In the lower part of the web page, click the **Bonus activation codes** link.

The **Bonus points** window opens, with the **Bonus activation codes** tab displayed.

4. In the list of received bonus activation codes, click the one that you want to use to activate the application.

A window opens, containing a bonus activation code.

5. Click the **Activate** button.

The **Activation** window opens, showing a message about verification of the activation code. After the activation code is verified, a window opens, showing a message about successful activation of Kaspersky Internet Security.

# USING THE APPLICATION FROM THE COMMAND PROMPT

You can use Kaspersky Internet Security at the command prompt.

Command prompt syntax:

```
avp.com <command> [settings]
```

To view help on the command prompt syntax, enter the following command:

```
avp.com [ /? | HELP ]
```

This command allows you to obtain a full list of commands that are available for managing Kaspersky Internet Security through the command prompt.

To obtain help on the syntax of a specific command, you can enter one of the following commands:

```
avp.com <command> /?
```

```
avp.com HELP <command>
```

At the command prompt, you can refer to the application either from the application installation folder or by specifying the full path to avp.com.

# CONTACTING TECHNICAL SUPPORT

This section describes the ways to get technical support and the terms on which it is available.

## IN THIS SECTION

---

How to get technical support.....	<a href="#">105</a>
Technical support by phone .....	<a href="#">105</a>
Getting technical support on My Kaspersky portal .....	<a href="#">105</a>
Collecting information for Technical Support.....	<a href="#">106</a>

## HOW TO GET TECHNICAL SUPPORT

If you do not find a solution to your problem in the application documentation or in one of the sources of information about the application, we recommend that you contact Kaspersky Lab Technical Support. Technical Support specialists will answer any of your questions about installing and using the application.

Before contacting Technical Support, please read the support rules (<http://support.kaspersky.com/support/rules>).

You can contact Technical Support in one of the following ways:

- By telephone. This method allows you to consult with specialists from our Russian-language or international Technical Support.
- Send request from My Kaspersky portal. This method allows you to contact our specialists using the query form.

Technical support is available only to users who have purchased a license for use of the application. No technical support is provided to users of trial versions.

## TECHNICAL SUPPORT BY PHONE

You can call Kaspersky Lab Technical Support specialists from most regions. You can find information about how to obtain technical support in your region and contact information for Technical Support on the Kaspersky Lab Technical Support website (<http://support.kaspersky.com/b2c#region2>).

Before contacting Technical Support, please read the support rules (<http://support.kaspersky.com/support/rules>). These rules contain information about the phone hours of Kaspersky Lab Technical Support and the requirements for receiving help from Kaspersky Lab Technical Support specialists.

## GETTING TECHNICAL SUPPORT ON MY KASPERSKY PORTAL

My Kaspersky (<https://my.kaspersky.com>) is a one-stop online resource for managing the protection of your devices and activation codes for Kaspersky Lab applications and for requesting technical support.

To access My Kaspersky portal, you have to register. To do so, enter your email address and create a password.

You can receive technical support via My Kaspersky portal in the following ways:

- Contact Technical Support and the Virus Lab.
- Contact Technical Support without using email.
- Track the status of your requests in real time.

You can also view a complete history of your technical support requests.

### Email request to Technical Support

You have to specify the following information in your email request to Technical Support:

- Application name and version number
- Operating system name and version number
- Problem description

A Technical Support representative will send an answer to your question to My Kaspersky portal.

### Online request to the Virus Lab

You can send requests for examination of suspicious files and web resources to the Virus Lab. You can also contact the Virus Lab if Kaspersky Internet Security generates a false positive with regard to files and web resources that you do not consider to be dangerous.

## COLLECTING INFORMATION FOR TECHNICAL SUPPORT

After you notify Technical Support specialists of a problem, they may ask you to create a report that contains information about your operating system and send it to Technical Support. Technical Support specialists may also ask you to create a trace file. The trace file allows tracing the process of performing application commands step by step and determining the stage of application operation at which an error occurs.

After Technical Support specialists analyze the data that you have sent, they can create an AVZ script and send it to you. Running AVZ scripts allows analyzing active processes for malicious code, scanning the system for malicious code, disinfecting / deleting infected files, and creating reports on results of system scans.

To provide better support on issues related to functioning of the application, Technical Support specialists may ask you to temporarily change application settings for debugging purposes while diagnostics are ongoing. To do so, you may need to perform the following actions:

- Activate collection of extended diagnostic information.
- Configure individual components of the application by changing special settings that are not accessible through the standard user interface.
- Reconfigure storage and sending of collected diagnostic information.
- Set up interception of network traffic and saving of network traffic to a file.

Technical Support specialists will give you all information necessary for performing these actions (step-by-step instructions, settings to be changed, scripts, additional command line features, debugging modules, special utilities, etc.) and will inform you of what data will be collected for debugging purposes. After the extended diagnostic information is collected, it is saved on the user's computer. The collected data is not sent automatically to Kaspersky Lab.

You are advised to perform the preceding actions only under the guidance of a Technical Support specialist after receiving instructions to do so. Changing application settings by yourself in ways not described in the Administrator's Guide or recommended by Technical Support specialists can cause slowdowns and crashes of the operating system, reduce the protection level of your computer, and damage the availability and integrity of the processed information.

## IN THIS SECTION

Creating a system state report .....	<a href="#">107</a>
Sending data files .....	<a href="#">107</a>
Contents and storage of trace files .....	<a href="#">108</a>
Running AVZ scripts .....	<a href="#">108</a>

## CREATING A SYSTEM STATE REPORT

➤ *To create a system state report:*

1. Open the main application window.
2. Click the  button in the lower part of the window.  
The **Support** window opens.
3. In the window that opens, click the **Support Tools** link to open the **Support Tools** window.
4. In the window that opens, click the **How to create an operating system state report** link to open a Knowledge Base article on how to create an operating system state report.
5. Follow the instructions in the Knowledge Base article.

## SENDING DATA FILES

After you have created the trace files and the system state report, you need to send them to Kaspersky Lab Technical Support specialists.

You will need a request number to upload files to the Technical Support server (see the section "Getting technical support on My Kaspersky portal" on page [105](#)). This number is available on My Kaspersky portal when you have an active request.

➤ *To upload the data files to the Technical Support server:*

1. Open the main application window.
2. Click the  button in the lower part of the window.  
The **Support** window opens.
3. Click the **Support Tools** link to open the **Support Tools** window.
4. In the window that opens, click the **Send report to Technical Support** link to open the **Send report** window.
5. Select the check boxes next to the data that you want to send to Technical Support.
6. Enter the number assigned to your request by Technical Support.
7. Click the **Send report** button.

The selected data files are packed and sent to the Technical Support server.

If you were unable to send the files for any reason, the data files can be stored on your computer and later sent from My Kaspersky portal.

➤ *To save data files to disk:*

1. Open the main application window.
2. Click the  button in the lower part of the window.  
The **Support** window opens.
3. In the window that opens, click the **Support Tools** link to open the **Support Tools** window.
4. In the window that opens, click the **Send report to Technical Support** link to open the **Send report** window.
5. Select the types of data to save to disk:
  - **Operating system information.** Select this check box to save information about the operating system of your computer to disk.
  - **Data received for analysis.** Select this check box to save application trace files to disk. Click the **<number of files>, <data volume>** link to open the **Data received for analysis** window. Select check boxes opposite the trace files that you want to save.
6. Click the **Save report** link to open the window for saving an archive with data files.
7. Specify the archive name and confirm saving.

The created archive can be sent to Technical Support from My Kaspersky portal.

## CONTENTS AND STORAGE OF TRACE FILES

Trace files are stored on the computer openly for seven days after the writing of trace files is disabled. Trace files are deleted permanently after seven days.

Trace files are stored in the ProgramData\Kaspersky Lab folder.

The format of trace file names is as follows: KAV<version number\_dateXX.XX\_timeXX.XX\_pidXXX.><trace file type>.log.

Trace files can contain confidential data. You can view the contents of a trace file by opening it in a text editor (such as Notepad).

## RUNNING AVZ SCRIPTS

You are advised not to change the text of an AVZ script received from Kaspersky Lab experts. If problems occur during script execution, please contact Technical Support.

➤ *To run an AVZ script:*

1. Open the main application window.
2. Click the  button in the lower part of the window.  
The **Support** window opens.
3. In the window that opens, click the **Support Tools** link.  
The **Support Tools** window opens.
4. In the window that opens, click the **Run script** link to open the **Script execution** window.
5. Copy the text from the script sent by Technical Support specialists, paste it in the entry field in the window that opens, and click the **Run** button.

The script runs.

If the script is successfully executed, the Wizard closes automatically. If an error occurs during script execution, the Wizard displays a corresponding message.

# LIMITATIONS AND WARNINGS

Kaspersky Internet Security has a number of limitations that are not critical to operation of the application.

## Limitations on upgrades from a previous version of the application

- During an upgrade of a previous version of Kaspersky Internet Security, the following application settings are reset to their default values: update sources, the list of trusted URLs, and the settings of Kaspersky URL Advisor.
- When a new version of Kaspersky Internet Security is installed over Kaspersky Internet Security 2011 and earlier, backup copies of files and quarantined objects are lost because their format is not supported and cannot be converted to the new format. During an upgrade from Kaspersky Internet Security 2012, the backup copies of files and quarantined objects can be converted to the new format. The backup storage in Kaspersky Internet Security 2013 or later format is supported and does not require converting to the new format.
- After an upgrade from a previous version of the application, Kaspersky Internet Security starts automatically even if automatic startup of the application is disabled in the settings that have been saved. When the operating system restarts afterwards, Kaspersky Internet Security does not start automatically if automatic startup of the application is disabled in the settings that have been saved.

## Limitations on the operation of certain components and automatic processing of files

Infected files are processed automatically according to rules created by Kaspersky Lab specialists. You cannot modify these rules manually. Rules can be updated following an update of databases and application modules. Firewall, Application Control, and Trusted Applications mode rules are also updated automatically.

## Website certificate check and file scan limitations

When checking a website certificate or scanning website files, the application may contact Kaspersky Security Network for information. If data from Kaspersky Security Network could not be retrieved, the application decides whether or not the file is infected and the certificate untrusted based on local anti-virus databases.

## Limitations of System Watcher functionality

Protection against cryptors (malware that encrypts user files) has the following limitations:

- The Temp system folder is used to support this functionality. If the system drive with the Temp folder has insufficient disk space to create temporary files, protection against cryptors is not provided. In this case, the application does not display a notification that files are not backed up (protection is not provided).
- Temporary files are deleted automatically when you close Kaspersky Internet Security or disable the System Watcher component.
- In case of an emergency termination of Kaspersky Internet Security, temporary files are not deleted automatically. To delete temporary files, clear the Temp folder manually. To do so, open the **Run** window (**Run** command under Windows XP) and in the **Open** field type %TEMP%. Click **OK**.

## Encrypted connections scan limitations

Due to technical limitations of the implementation of scanning algorithms, scanning of encrypted connections does not support certain extensions of the TLS 1.0 protocol and later versions (particularly NPN and ALPN). Connections via these protocols may be limited. Web browsers with SPDY protocol support use the HTTP over TLS protocol instead of SPDY even if the server to which the connection is established supports SPDY. This does not affect the level of connection security. If the server supports only the SPDY protocol and it is impossible to establish the connection via the HTTPS protocol, the application does not monitor the connection established.

Kaspersky Internet Security monitors only those protected connection which it is able to decrypt. The application does not monitor connections added to the list of exclusions (**Websites** link in the **Network settings** window). The following components perform decryption and scanning of encrypted traffic by default:

- Web Anti-Virus
- Safe Money
- Kaspersky URL Advisor
- Parental Control

Kaspersky Internet Security decrypts encrypted traffic while the user is using the Google Chrome browser if the Kaspersky Protection extension is disabled in this browser.

### **Warning about operation of the Anti-Spam component**

Anti-Spam functionality can be configured by editing the settings file for the Anti-Spam component.

### **Specifics of kernel memory scanning for rootkits in Protected Browser mode**

When an untrusted module is detected in Protected Browser mode, a new browser tab opens with a notification about malware detection. If this happens, you are recommended to exit the browser and run a Full Scan of the computer.

### **Specifics of clipboard data protection**

Kaspersky Internet Security allows an application to access clipboard in the following cases:

- An application with the active window attempts to place data in clipboard. The active window is the window that you are currently using.
- A trusted process of an application attempts to place data in clipboard.
- A trusted process of an application or a process with the active window attempts to receive data from clipboard.
- A an application process that previously placed data in clipboard attempts to receive this data from clipboard.

### **Warning about compatibility with Kaspersky Lab applications**

Kaspersky Internet Security is compatible with the following Kaspersky Lab applications:

- Kaspersky Fraud Prevention 2.0
- Kaspersky Fraud Prevention 2.5
- Kaspersky Fraud Prevention 3.0
- Kaspersky Fraud Prevention 3.5
- Kaspersky Password Manager 2.0
- Kaspersky Password Manager 5.0
- Kaspersky Password Manager 7.0

## Specifics of infected file processing by application components

By default, the application can delete infected files that cannot be disinfected. Removal by default can be performed during file processing by such components as Application Control, Mail Anti-Virus, File Anti-Virus, during scan tasks, and also when System Watcher detects malicious activity of applications.

## Limitations applicable to certain components in case of application installation together with Kaspersky Fraud Prevention for Endpoints

Operation of the following Kaspersky Internet Security components is limited in Protected Browser if the application is installed together with Kaspersky Fraud Prevention for Endpoints:

- Web Anti-Virus, except Anti-Phishing
- Parental Control
- Kaspersky URL Advisor
- Anti-Banner

## Warning about changes in IM Anti-Virus and Parental Control functionality

Beginning with the 2016 version of Kaspersky Internet Security, the IM Anti-Virus component does not scan messages transmitted via the IRC protocol.

Beginning with the 2016 version of Kaspersky Internet Security, the Parental Control component does not scan messages transmitted via IM clients.

## About personal data contained in report files

Report files are stored locally on your computer.

Path to report files: %allusersprofile%\Kaspersky Lab\AVP16.0.0\Report\Database.

Reports are stored in the following files:

- reports.db
- reports.db-wal
- reports.db-shm (does not contain any personal data)

Report files are protected against unauthorized access if self-defense is enabled in Kaspersky Internet Security. If self-defense is disabled, report files are not protected.

Report files can contain personal data obtained during operation of protection components, such as File Anti-Virus component, Mail Anti-Virus, Anti-Spam, Web Anti-Virus, and Parental Control.

Report files can contain the following personal data:

- IP address of the user's device
- Online browsing history
- Versions of the browser and operating system
- Names of cookies and other files and paths to them
- Email address, sender, message subject, message text, user names, and list of contacts

## Specifics of Autorun operation

The autorun process logs the results of its operation. Data is logged in text files named "kl-autorun-<date><time>.log". To view the types of data, open the **Run** window (**Run** command under Windows XP) and in the **Open** field type %TEMP% and click **OK**.

All trace files are saved at the path to setup files that were downloaded during operation of the autorun process. Data is stored for the duration of operation of the autorun process and deleted permanently when this process is terminated. Data is not sent anywhere.

## Kaspersky Internet Security limitations under Microsoft Windows 10

The following functionality is partly limited in the application installed on the Microsoft Windows 10 operating system:

- Self-Defense. Self-Defense of the application GUI does not work even when it is enabled.
- System Watcher.
- Protection against cryptors and screen lockers. The application can detect only the most basic varieties of cryptors and screen lockers.
- Malware disinfection in the system memory.
- Protection against screenshots.
- Clipboard data protection.
- Protection of the Protected Browser process against external attacks.

## Limitations on the operation of Application Control under Microsoft Windows 10:

- Custom application rules do not work.
- Application categorization in the new Windows user interface style is performed incorrectly.
- The Application Control component does not support the following operations and functions:
  - Hooks installation
  - Taking screenshots
  - Sending windows messages to other processes
  - Suspicious operations
  - Hooking incoming messages of the stream
  - Direct access to physical memory
  - Setting debug privileges
  - Access to password storage
  - Managing printer driver
  - Using program interfaces of other processes
  - Access to internal browser data
  - Access to critical objects of the operating system

- Using program interfaces of the operating system (DNS)
- Creating service
- Opening service for read
- Opening service for write
- Modifying service configuration
- Managing service
- Starting service
- Deleting service
- Saving registry keys to file
- Access to audio stream
- Changing system modules (KnownDlls)
- The following actions by Application Control are limited:
  - Starting driver: loading of drivers is not blocked; only a notification about a driver that has been loaded may be shown.
  - Pausing other processes and threads: only threads with suspend rights are intercepted under Microsoft Windows 10 (x86); opening of the process is additionally controlled under Microsoft Windows (x64).
  - Code intrusions: only threads with inject rights are intercepted under Microsoft Windows 10 (x86); opening of the process is additionally controlled under Microsoft Windows 10 (x64).
  - Duplicate internal process handle: copying of handles is controlled for processes and threads only.
  - Stopping other processes: controlled only at the level of opening of process handles and threads with terminate rights.
  - Exiting Microsoft Windows 10: only shutdown.exe launch is controlled – other mechanisms of exiting the operating system are not controlled.

### **Kaspersky Internet Security limitations under Microsoft Windows 10 with the Device Guard mode enabled:**

Enabling of the Network Attack Blocker component in the application interface is not available.

Operation of the following functionality is also partly limited:

- Rootkit search and disinfection (postponed disinfection of files after computer restart; detection of malware that creates autorun keys in the registry).
- Heuristic Analysis (emulation of the startup of suspicious applications).

# GLOSSARY

## A

### **ACTIVATING THE APPLICATION**

Switching the application to fully functional mode. Application activation is performed by the user during or after installation of the application. To activate the application, the user must have an activation code.

### **ACTIVATION CODE**

A code that you receive when purchasing a license for Kaspersky Internet Security. This code is required for activation of the application.

The activation code is a unique sequence of twenty alphanumeric characters in the format xxxxx-xxxxx-xxxxx-xxxxx.

### **ANTI-VIRUS DATABASES**

Databases that contain information about computer security threats known to Kaspersky Lab as of when the anti-virus databases are released. Entries in anti-virus databases allow detecting malicious code in scanned objects. Anti-virus databases are created by Kaspersky Lab specialists and updated hourly.

### **APPLICATION MODULES**

Files included in the Kaspersky Lab installation package that are responsible for performing the main tasks of the corresponding application. A particular application module corresponds to each type of task performed by the application (protection, scan, updates of databases and application modules).

## B

### **BLOCKING AN OBJECT**

Denying access to an object from third-party applications. A blocked object cannot be read, executed, changed, or deleted.

### **BONUS ACTIVATION CODE**

An activation code for Kaspersky Internet Security provided to the user in exchange for bonus points.

### **BONUS POINTS**

Bonus points are points that Kaspersky Lab awards to users who participate in the Protect a Friend program. Bonus points are provided to the user if the user publishes a link to a Kaspersky Lab application on social networks or pastes the link in an email message, and the user's friend then downloads the application installation package via this link and activates the application.

## C

### **COMPRESSED FILE**

An archive file that contains a decompression program and instructions for the operating system for executing it.

## D

### **DATABASE OF MALICIOUS WEB ADDRESSES**

A list of web addresses whose content may be considered to be dangerous. Created by Kaspersky Lab specialists, the list is regularly updated and is included in the Kaspersky Lab application package.

## **DATABASE OF PHISHING WEB ADDRESSES**

List of web addresses which have been defined as phishing addresses by Kaspersky Lab specialists. The databases are regularly updated and are part of the Kaspersky Lab application package.

## **DIGITAL SIGNATURE**

An encrypted block of data embedded in a document or application. A digital signature is used to identify the author of the document or application. To create a digital signature, the document or application author must have a digital certificate proving the author's identity.

A digital signature lets you verify the data source and data integrity and protect yourself against counterfeits.

## **DISK BOOT SECTOR**

A boot sector is a special area on a computer's hard drive, floppy disk, or other data storage device. It contains information on the disk's file system and a boot loader program, which is responsible for starting the operating system.

There exist a number of viruses that infect boot sectors, which are thus called boot viruses. The Kaspersky Lab application allows scanning boot sectors for viruses and disinfecting them if an infection is found.

## **F**

### **FALSE POSITIVE**

A situation when a Kaspersky Lab application considers a non-infected object to be infected because the object's code is similar to that of a virus.

### **FILE MASK**

Representation of a file name using wildcards. The standard wildcards used in file masks are \* and ?, where \* represents any number of any characters and ? stands for any single character.

## **H**

### **HEURISTIC ANALYZER**

A technology for detecting threats about which information has not yet been added to Kaspersky Lab databases. The heuristic analyzer detects objects whose behavior in the operating system may pose a security threat. Objects detected by the heuristic analyzer are considered to be probably infected. For example, an object may be considered probably infected if it contains sequences of commands that are typical of malicious objects (open file, write to file).

### **HYPERVERSOR**

An application supporting the parallel operation of several operating systems on one computer.

## **I**

### **ICHECKER TECHNOLOGY**

A technology that allows increasing the speed of anti-virus scanning by excluding objects that have remained unchanged since their last scan, provided that the scan parameters (the databases and the settings) have not been altered. The information for each file is stored in a special database. This technology is used in both real-time protection and on-demand scan modes.

For example, you have an archive file that was scanned by a Kaspersky Lab application and assigned not infected status. Next time, the application will skip this archive unless the archive has been altered or the scan settings have been changed. If you have changed the archive content by adding a new object to it, modified the scan settings, or updated the application databases, the archive will be re-scanned.

Limitations of iChecker technology:

- This technology does not work with large files, since it is faster to scan a file than to check whether the file has been modified since it was last scanned.
- The technology supports a limited number of formats.

### **INCOMPATIBLE APPLICATION**

An anti-virus application from a third-party developer or a Kaspersky Lab application that does not support management through Kaspersky Internet Security.

### **INFECTED OBJECT**

An object of which a portion of its code completely matches part of the code of known malware. Kaspersky Lab does not recommend accessing such objects.

## **K**

### **KASPERSKY LAB UPDATE SERVERS**

Kaspersky Lab HTTP servers from which updates of databases and software modules are downloaded.

### **KASPERSKY SECURITY NETWORK (KSN)**

An infrastructure of online services that provides access to the Kaspersky Lab database with constantly updated information about the reputation of files, web resources, and software. Use of data from Kaspersky Security Network ensures faster responses by Kaspersky Lab applications to new threats, improves the performance of some protection components, and reduces the likelihood of false positives.

### **KEYLOGGER**

A program designed for hidden logging of information about keys pressed by the user. Keyloggers function as keystroke interceptors.

## **L**

### **LICENSE TERM**

A time period during which you have access to the application features and rights to use additional services.

## **P**

### **PHISHING**

A type of Internet fraud aimed at obtaining unauthorized access to users' confidential data.

### **PROBABLE SPAM**

A message that cannot be unambiguously considered spam, but has several spam attributes (for example, certain types of mailings and advertising messages).

### **PROBABLY INFECTED OBJECT**

An object whose code contains portions of modified code from a known threat, or an object whose behavior is similar to that of a threat.

### **PROTECTED BROWSER**

A dedicated operation mode of a standard web browser designed for financial activities and online shopping. Using Protected Browser ensures safety of confidential data that you enter on the websites of banks and payment systems (such as banking card numbers or passwords for access to online banking services); it also prevents theft of assets when making money transfers online. Meanwhile, the standard browser used for accessing the website displays a message informing you that Protected Browser is being started.

## **PROTECTION COMPONENTS**

Integral parts of Kaspersky Internet Security intended for protection against specific types of threats (for example, Anti-Spam and Anti-Phishing). Each of the components is relatively independent of the other ones and can be disabled or configured individually.

## **PROTOCOL**

A clearly defined and standardized set of rules governing the interaction between a client and a server. Well-known protocols and the services associated with them include HTTP, FTP, and NNTP.

## **Q**

### **QUARANTINE**

A dedicated storage in which the application places backup copies of files that have been modified or deleted during disinfection. Copies of files are stored in a special format that is not dangerous for the computer.

## **R**

### **ROOTKIT**

A program or a set of programs for hiding traces of an intruder or malware in the operating system.

On Windows-based operating systems, a rootkit usually refers to a program that penetrates the operating system and intercepts system functions (Windows APIs). Interception and modification of low-level API functions are the main methods that allow these programs to make their presence in the operating system quite stealthy. A rootkit can usually also mask the presence of any processes, folders, and files that are stored on a disk drive, in addition to registry keys, if they are described in the configuration of the rootkit. Many rootkits install their own drivers and services on the operating system (these also are "invisible").

## **S**

### **SCRIPT**

A small computer program or an independent part of a program (function) which, as a rule, has been developed to execute a specific task. It is most often used with programs that are embedded in hypertext. Scripts are run, for example, when you open some websites.

If real-time protection is enabled, the application tracks the execution of scripts, intercepts them, and scans them for viruses. Depending on the results of scanning, you may block or allow the execution of a script.

### **SECURITY LEVEL**

The security level is defined as a predefined collection of settings for an application component.

### **SPAM**

Unsolicited mass email mailings, most often including advertisements.

### **STARTUP OBJECTS**

The set of programs needed to start and correctly operate the operating system and software installed on your computer. These objects are executed every time the operating system is started. There are viruses capable of infecting autorun objects specifically, which may lead, for example, to blocking of operating system startup.

## **T**

### **TASK**

The functions of the Kaspersky Lab application are implemented in the form of tasks, such as: Full Scan task or Update task.

## TASK SETTINGS

Application settings that are specific for each task type.

## THREAT LEVEL

An index showing the probability that an application poses a threat to the operating system. The threat level is calculated using heuristic analysis based on two types of criteria:

- Static (such as information about the executable file of an application: size, creation date, etc.)
- Dynamic, which are used while simulating the application's operation in a virtual environment (analysis of the application's system calls)

Threat level allows detecting behavior typical of malware. The lower the threat level is, the more actions the application is allowed to perform in the operating system.

## TRACES

Running the application in debugging mode; after each command is executed, the application is stopped, and the result of this step is displayed.

## TRAFFIC SCANNING

Real-time scanning that uses information from the current (latest) version of the databases for objects transferred over all protocols (for example, HTTP, FTP, and other protocols).

## TRUST GROUP

A group to which Kaspersky Internet Security assigns an application or a process depending on the following criteria: presence of a digital signature, reputation on Kaspersky Security Network, trust level of the application source, and the potential danger of actions performed by the application or process. Based on the trust group to which an application belongs, Kaspersky Internet Security can restrict the actions that the application may perform in the operating system.

In Kaspersky Internet Security, applications belong to one of the following trust groups: Trusted, Low Restricted, High Restricted, or Untrusted.

## TRUSTED PROCESS

A software process whose file operations are not restricted by the Kaspersky Lab application in real-time protection mode. When suspicious activity is detected in a trusted process, Kaspersky Internet Security removes the process from the list of trusted processes and blocks its actions.

## U

### UNKNOWN VIRUS

A new virus about which there is no information in the databases. Generally, unknown viruses are detected by the application in objects by using the heuristic analyzer. These objects are classified as probably infected.

### UPDATE

The procedure of replacing / adding new files (databases or application modules) retrieved from the Kaspersky Lab update servers.

### UPDATE PACKAGE

A file package designed for updating databases and application modules. The Kaspersky Lab application copies update packages from Kaspersky Lab update servers and automatically installs and applies them.

### USER PROFILE

Summary on the user's participation in the Protect a Friend program. The user profile contains the number of collected bonus points, a link to the page for downloading Kaspersky Internet Security, and bonus activation codes granted to the user.

**V****VIRUS**

A program that infects other ones, by adding its code to them in order to gain control when infected files are run. This simple definition allows identifying the main action performed by any virus: infection.

**VULNERABILITY**

A flaw in an operating system or an application that may be exploited by malware makers to penetrate the operating system or application and corrupt its integrity. Presence of a large number of vulnerabilities in an operating system makes it unreliable, because viruses that penetrate the operating system may cause disruptions in the operating system itself and in installed applications.

# KASPERSKY LAB ZAO

Kaspersky Lab software is internationally renowned for its protection against viruses, malware, spam, network and hacker attacks, and other threats.

In 2008, Kaspersky Lab was rated among the world's top four leading vendors of information security software solutions for end users (IDC Worldwide Endpoint Security Revenue by Vendor). Kaspersky Lab is the preferred developer of computer protection systems among home users in Russia, according to the COMCON survey "TGI-Russia 2009".

Kaspersky Lab was founded in Russia in 1997. Today, it is an international group of companies headquartered in Moscow with five regional divisions that manage the company's operations in Russia, Western and Eastern Europe, the Middle East, Africa, North and South America, Japan, China, and other countries in the Asia-Pacific region. The company employs more than 2,000 highly skilled professionals.

**PRODUCTS.** Kaspersky Lab's products provide protection for all systems, from home computers to large corporate networks.

The personal product range includes anti-virus software for all the devices used in digital life today, spanning desktop, laptop, and tablet computers, smartphones, and other mobile devices.

Kaspersky Lab delivers applications and services to protect workstations, file and web servers, mail gateways, and firewalls. Used in conjunction with Kaspersky Lab's centralized management system, these solutions ensure effective automated protection for companies and organizations against computer threats. Kaspersky Lab's products are certified by major test laboratories, compatible with software from diverse vendors, and optimized to run on many hardware platforms.

Kaspersky Lab's virus analysts work around the clock. Every day they uncover hundreds of new computer threats, create tools to detect and disinfect them, and include them in the databases used by Kaspersky Lab applications. *Kaspersky Lab's Anti-Virus database is updated hourly and the Anti-Spam database is updated every five minutes.*

**TECHNOLOGIES.** Many technologies that are now part and parcel of modern anti-virus tools were originally developed by Kaspersky Lab. This is one of the reasons why many third-party software developers have chosen to use the Kaspersky Anti-Virus engine in their own applications. Those companies include SafeNet (USA), Alt-N Technologies (USA), Blue Coat Systems (USA), Check Point Software Technologies (Israel), Clearswift (UK), CommuniGate Systems (USA), Openwave Messaging (Ireland), D-Link (Taiwan), M86 Security (USA), GFI Software (Malta), IBM (USA), Juniper Networks (USA), LANDesk (USA), Microsoft (USA), Netasq+Arkoon (France), NETGEAR (USA), Parallels (USA), SonicWALL (USA), WatchGuard Technologies (USA), ZyXEL Communications (Taiwan). Many of the company's innovative technologies are patented.

**ACHIEVEMENTS.** Over the years, Kaspersky Lab has won hundreds of awards for its services in combating computer threats. For example, in 2010 Kaspersky Anti-Virus received several top Advanced+ awards in a test administered by AV-Comparatives, a respected Austrian anti-virus laboratory. But Kaspersky Lab's main achievement is the loyalty of its users worldwide. The company's products and technologies protect more than 300 million users, and its corporate clients number more than 200,000.
